

STARLIKE®

PATENTED

2 PART EPOXY MORTAR

Litokol Starlike® is a new patented formula showcasing the latest in epoxy technology.

The Most Advanced Installation Product on the Market

Starlike® is the only product in the world that can be used in 3 different ways:

- 1) epoxy filler for grouting;
- 2) R-2T class adhesive (improved reactive adhesive with no vertical slip);
- 3) decorative wall finish (including the additive Decor).

As an adhesive, it is particularly recommended in the case of installation of thin mosaic. As a wall finish, it creates unique decorative solutions, levelling the walls with the same colour as the grouting.

New patented formula.
UV – Resistant attested by
Modena and Reggio Emilia University.

No more stains and dirt with Starlike® waterproof grout

The joints are always the critical point in terms of cleanliness of a tiled surface.

Starlike® is completely waterproof and makes the grouting surface **stain-proof and easy to wash** with normal detergents on the market.

The benefits of easy-to-clean grouting that doesn't absorb liquids or stains

Absorbent cement grouting is a critical obstacle in cleanliness of tiled surfaces. It is therefore possible to deteriorate for the following reasons:

- accumulation of dirt and other contaminants that leads to unclean and possibly unsafe surfaces;
- discolouration and chromatic variations, efflorescence.

These processes of degradation increase in the presence of moisture and steam such as in bathrooms and kitchens.

Unlike cement grout that requires sealing and maintenance Starlike Epoxy does not absorb liquids and dirt and can therefore be easily washed. It additionally prevents the proliferation of unwanted contaminants ensuring the best possible and most hygienic grout surface.

Grouting in contact with aggressive or chemical substances

- dairies
- oil mills
- abattoirs
- breweries and wineries
- the food industry in general
- tanks containing thermal or brackish water
- tanks for fish breeding

Easy to clean even for applications on very rough R12 tiles

Unlike colour pigments, the Starlike® **coloured quartz micro-beads** do not adhere to the surfaces of tiles (even the roughest non-slip R12 tiles) and are removed by simply wiping with a sponge.

Beauty and strength in every residential situation

- For interior and exterior wall and floor ceramic and mosaic tile installation and grouting;
- underfloor heating;
- flooring and wall tiles for bathrooms and showers;
- countertops;
- terraces and balconies.

Grouting that is resistant to the most extreme industrial applications

Industrial floors subject to high stresses such as the trafficking of trolleys, forklifts and pallet trucks.

For flooring subject to a high level of public and commercial use

Flooring intended for significant use such as shopping centres, airports, stations, sports facilities, offices and shops, bars and public buildings.

Safer for the user due to its non-corrosive nature

Starlike® is safer for the user and safeguards the environment: the same safety labelling as a normal cementitious product. Part B of Starlike® (catalyst) is non corrosive as is commonly the case in other products on the market.

Safe for housing as it has very low VOC emissions

Many products and materials in domestic dwellings contain VOCs (volatile organic compounds) which may be released over time. Starlike® products® have **very low emissions of volatile organic compounds** - Class A + according to French Regulations.
