

GENERAL CARE

Wash your sink using warm water, a non-abrasive liquid cleaner or detergent and a soft cloth or non-abrasive woven nylon pad. Your sink may be cleaned as often as it is used.

HEAVY STAINS

Most stains incurred during normal use can be washed away with water and a mild cleaner such as Comet, BON AMI, Bar Keepers Friend, Soft Scrub and a green Scotch Brite pad.

Some stains may require a diluted solution of bleach. Do not leave concentrated bleach soaking in your sink as it could cause discoloration.

To prevent staining and discoloration, always rinse your sink after use with clean warm water.

ADDITIONAL RECOMMENDATIONS

Do not use wire wool or steel soap pads as steel particles can become embedded in your sink and rust.

For hard water, calcium or lime deposits wipe with white vinegar and a non-abrasive woven nylon pad. Rinse after 20 minutes.

TEMPERATURE RESISTANCE

IPT Sinks withstand very well the Hot Pan Test required in the DIN EN 13310:2015.

In the Hot Pan Test, a standardized aluminum bowl filled with wax with a temperature of 180°C has been used while being put in the sink for 20 minutes. The area which has undergone this impact is afterward inspected for damages, cracks, etc.
