# PAINT & VARNISH STRIPPER

Visit [EZstrip.ca](http://EZstrip.ca) today for detailed instructions and project demos!

## CARE & USAGE INSTRUCTIONS

1

Shake well before use. Apply (brush, roll on, or spray) a liberal coating of EZ Strip. For layered paint, wait ten minutes before applying a second coat of EZ Strip. Cover area with plastic film to prevent drying. Do not let EZ Strip dry out as it will stop working, if EZ Strip does dry out, re-apply.

2

Determine performance time using these guidelines:

**Most Painted Surfaces:**

30 minutes to 1 hour

**Multi-layered paint:**

1 hour to overnight

**Stain, floor wax, and varnish:**

15 to 30 minutes

**Polyurethane and acrylic:**

1 to 2 hours

3

Use a scraping blade to remove softened material and discard safely. Finish removal using a scouring pad or a stainless steel scouring ball with warm water to remove remainder of softened material.

4

To finish, wipe with a damp cloth.

Area must be neutralized with water or EZ Strip will continue to work.

Allow surface to dry completely before sanding or painting. \*For best performance use EZ Strip above 10°C (50° F). Do not use in direct sunlight. Do not freeze. May etch some plastics.

How To Video

Disposal: Allow liquid to evaporate and residue to dry outdoors. Then dispose of in accordance with local, state and federal regulations

Avoid Contact with Eyes. If injected drink plenty of water.
