

To use a garden trowel, you will need to follow these steps:

Step 1 - Place tip in soil

Place the sharpened tip of the blade into the soil.

Step 2 - Place pressure on handle

Whilst holding the handle, push the blade into the ground until the bottom of the tang is touching the soil.

Step 3 - Lever handle

Next press down on the top end of the handle to lever the blade and the soil out of the ground.

Step 4 - Lift garden trowel

Lift the garden trowel, by the handle, out of the ground and place the soil in a pile next to the hole. Repeat steps one to four until a hole of the right size has been made.
