INTRODUCTION
Let the Garage Parking Sensor help you consistently guide your car into a safe parking distance. The Garage Parking Sensor is low maintenance and easy to install.

The Garage Parking Sensor consists of a sensor module and a display module. The sensor module transmits harmless, ultrasonic pulses that are reflected by an incoming object.

1. When a vehicle is detected, more pulses are transmitted to track the approaching vehicle speed and distance.
2. The display unit, mounted where the driver can easily see it, uses a bright GREEN light to indicate that the vehicle has been detected. A blinking YELLOW light indicates when you are close to your stopping distance.
3. The vehicle reaches the desired stopping distance, a RED light will illuminate and stop on.

MOUNTING THE GARAGE PARKING SENSOR
ADHESIVE STRIPS & VELCRO MOUNTING

The large display unit will be mounted within the drivers line of sight. The small sensor will be mounted directly below the display. It should be level with the center of the car bumper.

1. Place the double sided tape onto the back of the small sensor module.
2. Mount the small sensor at bumper height of the vehicle that is intended for use with the Garage Parking Sensor. Be sure the area of the wall, or mounting surface, is free of any dust and debris. (See associated images marked with an "*"

OPERATION
The Striker Garage Parking Sensor should now be providing a safe parking distance.

SETTING THE DESIRED STOPPING DISTANCE
The Striker Garage Parking Sensor can be adjusted to set the stop zone from 1 inches away from the sensor up to 10 feet away from the sensor.

1. The default distance is set to turn the red light on at 1 foot from the sensor. If you would like a different stopping distance follow the steps below. You may change the distance as many times as you like.
2. Park your car exactly where you want it and stop the parking sensor. It may be wise to have a 2 person guide you to the desired location to ensure you don't hit anything with your car.
3. Once your car is parked exactly where you would like the red light to turn on, simply press the "set" button firmly. The red, yellow, and green LEDs will light up. Release the button. (Note: you can reset the parking distance anytime by repeating this step).
4. Your Striker Garage Parking Sensor is now set to illuminate the red light at that distance every time your vehicle approaches the sensor.

NOTE:
Garage Parking Sensor stop distances can vary due to vehicle type, temperature, and weather. It is important to check operation time and make sufficient stopping distances for these variations. Always test the desired stop distance when parking a new vehicle and/or article moving location or stopping distance if necessary.

Warwaylighting:
The Garage Parking Sensor is equipped with walkway lighting as a courtesy feature. The walkway lighting is a red light located on the bottom of the sensor. The walkway light will illuminate the walk way area below the bumper of the vehicle, an area that is typically where your walkway will illuminate when your vehicle reaches predetermined stopping location and will stay on for 45 seconds. It will then turn off and shut off.

CAUTION!
The Garage Parking Sensor was designed for use in a parking setting. For rapid entrance/exit speeds, the display module may not accurately reflect distance as approach slowing. Remember, this is only a parking aid. It does not stop your car. That is your job. Due to variations in driver skill and perception time we make no guarantees with this product. Use at your own risk and approach with caution every time. When in doubt, stop, get out, and check the conditions and location of the car.

The Garage Parking Sensor is not suitable for use in wet conditions.

IMPORTANT:
Remove batteries before storing the Garage Parking Sensor. Condensation may form and corrode over time and may cause permanent damage to the unit. Different types of batteries or new and used batteries should not be mixed. exhausted batteries should be removed from the unit and disposed of properly.

LED INDICATION STATE:
Detection Zone (green LED) -- 15 second time out
Stow Away Zone (yellow LED) -- 15 second time out
Stop Zone (red LED) -- 15 second time out

Walkwaylighting (white LED) -- 45 second time out
Lever Battery Alarm (yellow/flash LED) Flash every 5 seconds
Minimum Stop Range: 6 inches
Maximum Stop Range: 1 foot
The green light illuminates as soon as it detects your vehicle within 8 feet of the sensor.

The yellow light illuminates 1.5 feet from the pre-determined stop zone.

WARRANTY:
Striker products are guaranteed 1 year warranty against manufacture and defects under normal use. In order to claim warranty, the original receipt must be presented. Claims under warranty will be repaired or replaced. Call Striker Customer Service: 1-800-200-9313.

This warranty gives you specific legal rights. Rights vary from state to state.

- Do not mix old and new batteries.
- Do not mix alkaline, standard (carbon zinc), or rechargeable (Ni-Cd, Ni-MH, etc) batteries.
- Dispose of batteries properly.
