

Metal Hammock Stand

Introduction

Thank you for purchasing our metal hammock stand. This stand is designed for use with hammocks that are double sized.

Assembly

Place each Foot Base (A) on the floor. Place the base so that connector tube which is parallel to the floor faces inwards and both are facing each other. This will allow you to connect the support beam across the floor.

Place Support Beam (C) between the Foot Bases (A) and connect.

Connect the End Cap Arms (B) to each Foot Base (A)

Insert the S-Hooks (D) into the hole at the top of each End Cap Arm (B).

Use

You are now ready to attach your hammock. For new hammocks, you may need to use the hardware supplied with it. In this case, simply attach the hammock chains to the large S-Hooks on the stand. Then use the smaller S-Hooks supplied with the hammock to attach the hammock to the chain.

Once the hammock has stretched out through use, you can remove the chains and small S-Hooks and reattach the hammock directly to the large S-Hooks on the metal stand.
