

Assembly Instructions: 7917-FM (Whitaker)

IMPORTANT:

- ALL INSTALLATION WORK SHOULD BE DONE BY ACCREDITED PROFESSIONAL.
- SHUT OFF POWER SUPPLY AT FUSE OR CIRCUIT BREAKER!
- USE ONLY THE SPECIFIED BULBS. DO NOT EXCEED THE MAXIMUM WATTAGE!

For Customer Service, please contact the place of purchase.

PREPARING FOR INSTALLATION

Remove all of the contents from the carton. See the important notes above. Remove the old fixture from the ceiling, including the old mounting strap.

1. Take the mounting strap assembly from the parts bag. Mounting strap (B) contains several threaded holes. Two of mounting screws (A) should be attached to mounting strap (B). You may need to tighten nuts (C) that hold these screws in place. If the screws are not attached, please hold ceiling pan (F) up to mounting strap (B). Line up the holes in ceiling pan (F) with the holes in mounting strap (B) and insert mounting screws (A) into mounting strap (B) so that mounting screws (A) protrude through the holes in ceiling pan (F). Mounting screws (A) are long, please test ceiling pan (F) against the mounting strap to see how far you should insert the screws. Tighten nuts (C) onto mounting screws (A) to hold the screws in place.

2. Place mounting strap (B) over the junction box so that mounting screws (A) are vertical, and in alignment with the hole locations on ceiling pan (F). Secure mounting strap (B) to the junction box with mounting screws (D) and a screwdriver. Tighten the screws securely.

How to Identify the Fixture's Wires		
Hot	Neutral	Ground
Smooth	Ribbed	Bare Metal, Green, or Green Inner Thread
Black	White	
Black Inner Thread	White Inner Thread	

The diagram shows three types of wires: a smooth black wire labeled 'Hot', a ribbed white wire labeled 'Neutral', and a bare metal wire labeled 'Ground'. It also shows a wire with a black inner thread labeled 'Hot' and a wire with a white inner thread labeled 'Neutral'.

CONNECTING THE WIRES

3. Have an assistant support the fixture's weight while completing the wiring. Refer to the wiring diagram below and attach the fixture's wires to the power supply wires from the junction box. Connect Hot to Hot, Neutral to Neutral, and Ground to Ground. Twist the ends of the wire pairs together, and then twist on a wire connector. Make sure all twists are in the same direction. If there is no house ground wire coming from the junction box, locate ground screw (E) on the mounting bracket/mounting strap and wrap the fixture's ground wire around the ground screw. Use a screwdriver to tighten the top of ground screw (E) onto the wires and into the mounting bracket/mounting strap. Tuck the wires into the junction box.

NOTE: Please use the attached hexagonal spanner tool to tighten the center rod until the cables are tight. Then double check that the shade is straight.

FINISHING THE INSTALLATION

4. Raise ceiling pan (F) to the ceiling. Position mounting screws (A) so that they protrude through the openings of ceiling pan (F). Secure ceiling pan (F) in place with decorative nuts (H).

5. Install light bulbs (not included) in sockets (G) in accordance with the fixture's specifications.

Your installation is complete. Turn on the power and test the fixture.

CLEANING TIPS

Treat the fixture gently! Regular cleaning will reduce the need for deep cleaning. For regular cleaning, turn off the light and wipe down the fixture with a clean lint-free cotton or microfiber cloth. Never spray cleaner directly onto the fixture.
