

EVERGREEN CARE GUIDE

Your evergreen wreath, swag, or garland has been hand-crafted from fresh materials and shipped to you with care. Some needle loss is to be expected during transit. This is a natural occurrence that should not affect the appearance of the product. Simply shake the product or tap it against your palm to allow any loose needles to fall.

Unpack your evergreen decoration immediately upon arrival and spritz it with water. If you are not ready to display the product when it arrives, store it in a cool, dark location.

Leave the product in the plastic bag to help preserve moisture, loosening the bag slightly to allow for air circulation.

Evergreen decorations displayed outdoors in cool climates require little to no supplemental water. Those displayed in warm climates or indoor areas should be spritzed with water once every 2-3 days. You may also place the product in a few inches of water in a sink or bathtub to allow it to absorb moisture through its stems.

To maximize longevity, keep the product out of direct sunlight and away from heat sources such as heater vents, space heaters, and sunny windows. Evergreen decorations kept outdoors tend to last longer than those kept indoors.

Consider moving the product indoors for holiday entertaining, then placing it back outdoors after the event.
