

Easy Wall™ INSTALLATION INSTRUCTIONS

Add your own accessories kit!

Parts Included:

- 8 Easy Wall boards
- 4 decorative outside corners
- 64 screws
- Assembly support

One-Person Step-by-Step Instructions

Notes:

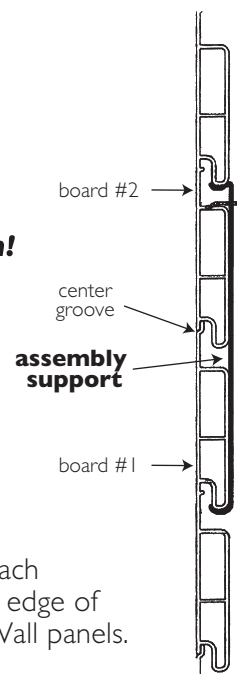

- 64 panhead screws are required for installation.
- Since EasyWall can be installed in either a 4' x 4' or a 2' x 8' configuration, plan the placement of the first board accordingly to allow proper space to build upwards.
- We recommend that heavier objects be located near screw heads for additional strength.

STUD WALL APPLICATION:

1. Take first piece of your easy wall panel with the top leg (figure A) pointed up. Position where you want the bottom of your Easy Wall storage center and level.

This step is critical for proper mounting and professional looking installation!

2. Drive screws through the center groove and top leg (figure B) into wall studs. Each 4' panel requires eight screws.
3. Place next panel (top leg up, figure C) onto previously installed piece using the assembly support connecting the two center grooves (see diagram on right), maintaining the proper gap for hardware.
4. Secure second board with screws as instructed in #2.
5. Repeat steps #2 through #4 to complete the wall. Remove the assembly support and place in the next center groove.
6. Remove backing from tape on decorative outside corners. Adhere two outside corners to each vertical edge of completed 4' x 4' wall or one to each outside edge and one to each joining edge of a 2' x 8' wall. Apply them to side edges with the adhesive sticking to the front of the Easy Wall panels.

DRYWALL APPLICATION:

1. Locate Studs and proceed with previous steps #1 through #5.
