CHROMATIC UNIFORMITY

BETWEEN DIFFERENT MATERIALS

Starlike® ColorCrystal is also especially recommended for grouting back-painted glass mosaics or mosaics composed of different materials such as glass and ceramics.

Perfect chromatic uniformity is achieved between the joints and mosaic tiles, producing a strong, visually continuous, effect in any housing context.

5 COLORS

The 5 assorted colours: Pompei Red, Capri Green, Taormina Blue, Havana Beige and Kioto Pink, have been deeply studied to equally grout different shades of mosaics in a uniform chromatic way, even when they are slightly transparent or opaque.

STARLIKE® COLORCRYSTAL: **THE NEW** **TRANSLUCENT GROUT** **FOR MOSAICS**

Litokol's research latest innovative outcome in Starlike® range is Starlike® ColorCrystal, a new generation coloured translucent grout which joins Starlike® Crystal. This new product comes from the understanding that mosaic tiles are made with a host of techniques and materials, determining an infinite variety of surfaces and aesthetic solutions. Mosaic coverings or floors require high-quality grouting products which help this antique decoration technique stand out, where colour shades and laying techniques play a prominent role in implementing works of a rare beauty and value.

The team of researchers working in Litokol's Laboratory, have developed Starlike® ColorCrystal, a new conception of translucent coloured grout that filters light.

SIMPLE **APPLICATION** **AND CLEANING**

The special epoxy resin blend made of glass beads with a very fine particle size is the secret of product's fluidity that makes easy both the application and the cleaning steps, conferring smooth and compact appearance to the grout.

Starlike® ColorCrystal keeps the aesthetic characteristics of the surfaces over time: it is non-absorbent, easy to clean, suitable even in case of environments having high humidity, chemical contact, exposure to UV rays

RESISTANT TO **CHEMICAL CONTACT** **AND EXPOSURE TO UV RAYS**

Starlike® ColorCrystal resists mechanical stress, chemical contact, exposure to UV rays and guarantees the durability of surfaces and their conservation over time, preserving the beauty of the mosaics and the living quality of the environments.
