

# POP-UP PIT

## CUSTOMER MANUAL

# LIVE LIFE FIRESIDE

---

There's just something about sitting around a campfire. People unplug and just appreciate the family and friends around them. Some of the best conversations occur while sitting around a campfire, even meals taste better when cooked over an open flame. The campfire is the source of light, a safe zone of warmth and community. Gazing into the flames, we connect to our past. For thousands of years, man has sat around a fire, not just for fun, but for necessity. When we build a campfire, it reminds us of a simpler time.

The campfire remains at the heart of any outdoor adventure, yet it has been overlooked as technology has advanced. Every year we see new tents, better sleeping bags, more comfortable chairs, and colder coolers. Everything around the campfire has been innovated with the latest technology, but the campfire remains the same, a hole in the ground that holds destructive capabilities.

Fireside Outdoor was created with a simple purpose in mind: Engineer products that make managing an outdoor fire easier and safer. With the help of innovative materials and a team of skillful engineers, we are creating common sense solutions to long lasting problems.

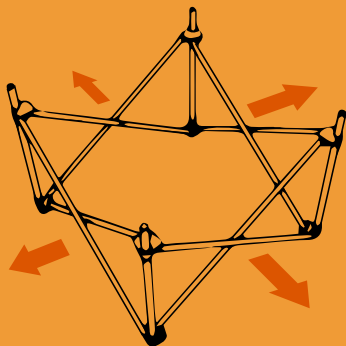

This manual will help you get the most out of your Fireside Outdoor products so please keep it safe and refer to it for assistance and tips.

# ASSEMBLING YOUR POP-UP PIT

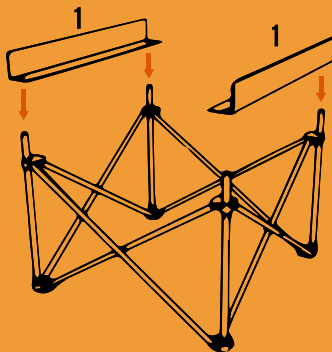

---

1

Open your Pop-Up Pit frame to its fully seated position.

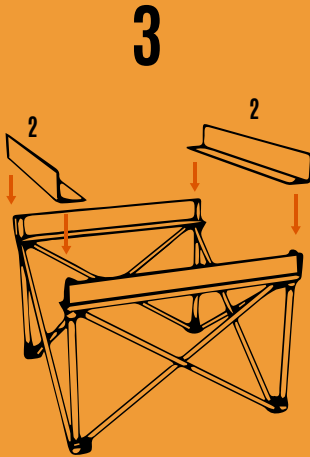

2

Pay close attention to which Ember Guard has the badge, this should be set aside until Step 3. Two Ember Guards should be placed on the frame parallel from one another. Guide the upright pole of the frame through the pre-cut holes in the Ember Guards.

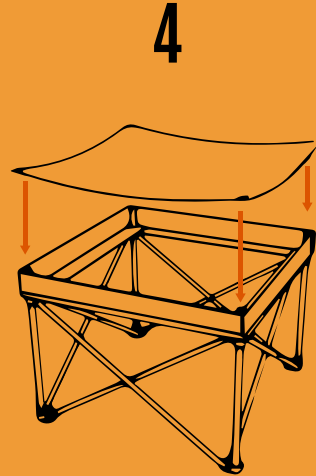

⚠ Your Pop-Up Pit may feel 'stiff' upon first use, this will subside after your first fire.

⚠ Your Pop-Up Pit will come wrapped with straps, keep these as they will aid in storage and packing in the future!

Repeat Step 2 with the remaining two Ember Guards. Note that the Ember Guard with the badge should be put on in this step

⚠ If you are having trouble applying the Ember Guards or Fire Mesh WD-40 can be used on the upright poles for lubrication.

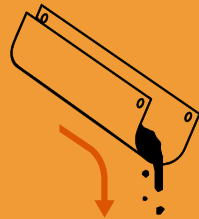

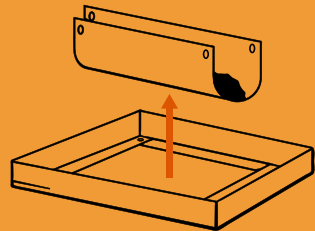

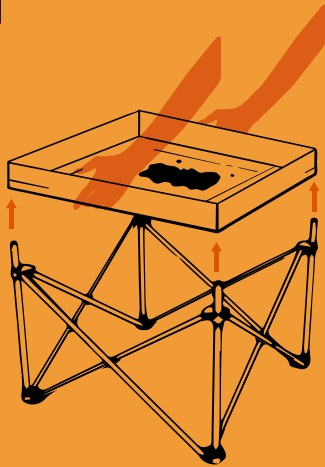

Holding the Fire Mesh with the folded edges facing down, each of the four grommets should be placed over the upright poles of the frame. Take care to not let any one corner drop too far down the uprights.

Once the uprights are through the grommets slide the Fire Mesh down as one unit until the Fire Mesh is fully seated on top of the Ember Guards.

# DISASSEMBLY AND PACKING

1

Remove the ashes from your pit. This can be done by dumping the pit, by using a shovel, or by removing the Fire Mesh. To remove the Fire Mesh look for the two bottom Ember Guards from Step 2 of the assembly. Simply place hands in the middle of each Ember Guard and pull straight

up keeping the Ember Guards parallel to the ground. This should remove all four Ember Guards as well as the Fire Mesh in one unit. The Fire Mesh can then be funneled, and the ash dumped out from it

## WARNING

Ensure your fire is completely extinguished before handling or touching the Pop-Up Pit

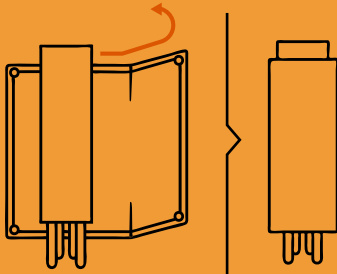

---

2

Close the frame of the Pop-Up Pit and use the Ember Guards to form a box around the frame.

3

Place the Fire Mesh with the folded side up on the ground. Place the frame and Ember Guard construction on top of the Fire Mesh and roll together tightly. Repeat for Heat shield if applicable.

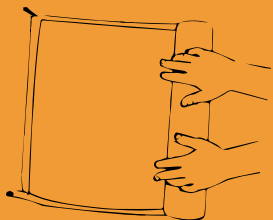

4

Using the included straps, strap the top and bottom of the packed Pop-Up Pit to ensure the Fire Mesh does not uncoil. Place the Pop-Up Pit back inside its carrying bag, with the four poles from the frame towards the opening of the bag.

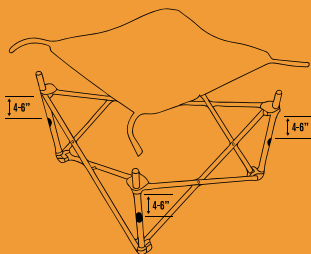

# HEAT SHIELD SETUP

1

Unroll your heat shield, setting aside the included Velcro dots.

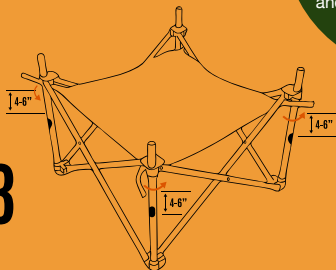

2

Attach the included Velcro locator dots 3" below the corner connectors of the Pop-Up Pit frame and place the heat shield in through the top of the frame.

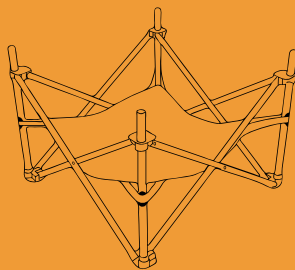

There are more than 10 billion outdoor outings every year in the US alone. This can take a huge toll on our environment, be sure to pack out what you pack in and always practice 'leave no trace' fires.

3

Wrap the high temperature velcro straps around the locator dots and secure back to the heat shield.

4

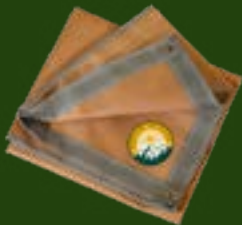

Push down the center of the heat shield and roll the edges to form a bowl shape.

# ENHANCE YOUR FIRESIDE EXPERIENCE

## THERMAL PROTECTION GLOVES

Protect your hands while working with your campfire or barbecue. Great for any open fires, barbecue grilling or even the home kitchen.

## GROUND EMBER MAT

Use your Fireside Outdoor Ember Mat to keep popping embers and blowing ashes from damaging or polluting the ground around your fire pit or grill.

## CAMPFIRE DEFENDER

Take Control Over Your Campfire! Cover your fire at the end of a night and safely keep your coals burning for 8 hours Wake Up To Hot Goals!
