OPERATION

Before Use

Clean the refrigerator.
Clean the refrigerator thoroughly and wipe off all dust that accumulated during shipping.

⚠️ CAUTION

- Wipe adhesive residue off with your thumb or dish detergent. Do not use sharp objects or abrasive, flammable, or alcohol-based cleaners.
- Do not peel off the model or serial number label or the technical information on the rear surface of the refrigerator.

Open refrigerator and freezer doors to ventilate the interior.
The inside of the refrigerator may smell like plastic at first. Remove any adhesive tape from inside the refrigerator and open the refrigerator doors and the freezer drawers for ventilation.

Connect the power supply.
Check if the power supply is connected before use.
Read the “Turning On The Power” section.

Wait for the refrigerator to cool.
Allow the refrigerator to run for at least two to three hours before putting food in it. Check the flow of cold air in the freezer compartment to ensure proper cooling.

⚠️ CAUTION

- Putting food in the refrigerator before it has cooled could cause the food to spoil, or a bad odor to remain inside the refrigerator.

The refrigerator makes a loud noise after initial operation.
This is normal. The volume will decrease as the temperature decreases.
Control Panel

Depending on the model, some of the following functions may not be available.

Control Panel Features

1. **Freezer Temperature**
   Indicates the set temperature of the freezer compartment in Celsius (°C) or Fahrenheit (°F).
   The default freezer temperature is 0°F (-18 °C). Press the Freezer button repeatedly to select a new set temperature from -6 °F to 8 °F (-21 °C to -13 °C).

2. **Refrigerator Temperature**
   Indicates the set temperature of the refrigerator compartment in Celsius (°C) or Fahrenheit (°F).
   The default refrigerator temperature is 37 °F (3 °C). Press the Refrigerator button repeatedly to select a new set temperature from 33 °F to 46 °F (1 °C to 8 °C).

3. **Water Filter**
   Replace the water filter when the Replace Filter icon turns on. After replacing the water filter, press and hold the Water Filter button for three seconds to turn the icon light off. Replace the water filter approximately every six months.

4. **Ice Plus**
   This function increases both ice making and freezing capabilities.
   - Press the Ice Plus button to illuminate the icon and activate the function for 24 hours. The function automatically shuts off after 24 hours.
   - Stop the function manually by pressing the button once more.

**NOTE**
- When the refrigerator is in the Power Saving Mode, the display remains off until a door is opened or a button is pressed. Once on, the display remains on for 20 seconds.

**NOTE**
- To change the temperature mode from °F to °C (or vice versa) press and hold the Refrigerator and Freezer Temperature buttons simultaneously for approximately five seconds. The temperature indicator on the display window switches between Celsius and Fahrenheit.
- The displayed temperature is the target temperature, and not the actual temperature of the refrigerator. The actual refrigerator temperature depends on the food inside the refrigerator.

**CAUTION**

Display Mode (For Store Use Only)
- The Display Mode disables all cooling in the refrigerator and freezer sections to conserve energy while on display in a retail store. When activated, OFF is displayed on the control panel and the display remains on for 20 seconds.

To deactivate / activate:
- With either refrigerator door opened, press and hold the Refrigerator and Ice Plus buttons at the same time for five seconds. The control panel beeps and the temperature settings display to confirm that Display Mode is deactivated. Use the same procedure to activate Display Mode.
Automatic Icemaker

**NOTE**
- The automatic icemaker can automatically make 12 cubes at a time, 50-110 pieces within a 24 hour period if conditions are favorable. This amount may vary according to the environment (ambient temperature around the appliance, frequency of the door being opened, amount of food stored in the appliance, etc.).
- If the ice bin is completely filled with ice, ice production will stop.
- Sound of ice dropping into the ice bin is normal.
- The icemaker produces ice once approximately 48 hours have passed after the appliance is initially installed.
- Discard the first ice cubes produced after initial install.
- Ice cubes which are stored in the ice bin for a long time may clump together and be difficult to separate. If this happens, empty the ice bin completely and clean it before reinstalling it.

**WARNING**

**Personal Injury Hazard**
- DO NOT place fingers or hands on the automatic ice making mechanism while the refrigerator is plugged in.
- Do not keep the power turned on to the icemaker it can damage the icemaker.

**CAUTION**

Never store beverage cans or other items in the ice bin for the purpose of rapid cooling. Doing so may damage the icemaker or the containers may burst.
- To avoid personal injury, keep hands out of the ice door and passage.

Turning the Automatic Icemaker On or Off

To turn off the automatic icemaker, set the icemaker switch to OFF (O). To turn on the automatic icemaker, set the switch to ON (I).

**NOTE**
- The icemaker water valve will buzz as the icemaker fills with water. If the power switch is in the ON (I) position, it will buzz even if it has not yet been hooked up to water. To stop the buzzing, move the power switch to OFF (O).
- The icemaker water valve buzzes as the icemaker fills with water. If the Ice On/Off button is in the ON mode, it will buzz even if it has not yet been hooked up to water. To stop the buzzing, press the Ice On/Off button to turn it off.
- You will hear the sound of cubes dropping into the bin and water running in the pipes as the icemaker refills.

Preparing for Vacation

Set the icemaker power switch to OFF (O) and shut off the water supply to the appliance.

**NOTE**
- The ice bin should be emptied any time the icemaker on/off switch is turned to the OFF (O) position.
- If the ambient temperature will drop below freezing, have a qualified technician drain the water supply system to prevent serious property damage due to flooding caused by ruptured water lines or connections.

If the ambient temperature will drop below freezing, have a qualified technician drain the water supply system to prevent serious property damage due to flooding caused by ruptured water lines or connections.
Storing Food

Each compartment inside the refrigerator is designed to store different types of food. Store food in the optimal space to enjoy the freshest taste.

![CAUTION]

- Do not overfill or pack items too tightly into door bins. Doing so may cause damage to the bin or personal injury if items are removed with excessive force.
- Do not store glass containers in the freezer. Contents may expand when frozen, break the container and cause injury.

NOTE
- If you are leaving home for a short period, like a short vacation, the refrigerator should be left on. Refrigerated foods that are able to be frozen will stay preserved longer if stored in the freezer.
- If you are leaving the refrigerator turned off for an extended period, remove all food and unplug the power cord. Clean the interior, and leave the doors open to prevent fungi from growing in the refrigerator.
- Do not store food with high moisture content towards the top of the refrigerator. The moisture could come in direct contact with the cold air and freeze.
- Wash food before storing it in the refrigerator. Vegetables should be washed, and food packaging should be wiped down to prevent adjacent foods from being contaminated.
- If the refrigerator is kept in a hot and humid place, frequent opening of the door or storing a lot of vegetables in the refrigerator may cause condensation to form. Wipe off the condensation with a clean cloth or a paper towel.
- If the refrigerator door or freezer drawer is opened or closed too often, warm air may penetrate the refrigerator and raise its temperature. This can increase the running costs of the unit.

Food Storage Tips

Wrap or store food in the refrigerator in airtight and moisture-proof material unless otherwise noted. This prevents food odor and taste transfer throughout the refrigerator. For dated products, check date code to ensure freshness.

<table>
<thead>
<tr>
<th>Food</th>
<th>How to</th>
</tr>
</thead>
<tbody>
<tr>
<td>Butter or Margarine</td>
<td>Keep opened butter in covered dish or closed compartment. When storing an extra supply, wrap in freezer packaging and freeze.</td>
</tr>
<tr>
<td>Cheese</td>
<td>Store in original wrapping until used. Once opened, rewrap tightly in plastic wrap or aluminum foil.</td>
</tr>
<tr>
<td>Milk</td>
<td>Wipe milk cartons. For coldest milk, place containers on an interior shelf.</td>
</tr>
<tr>
<td>Eggs</td>
<td>Store in original carton on interior shelf, not on door shelf.</td>
</tr>
<tr>
<td>Fruit</td>
<td>Do not wash or hull fruit until it is ready to be used. Sort and keep fruit in original container in a crisper, or store in completely closed paper bag on refrigerator shelf.</td>
</tr>
<tr>
<td>Leafy Vegetables</td>
<td>Remove store wrapping, trim or tear off bruised and discolored areas, wash in cold water, and drain. Place in plastic bag or plastic container and store in crisper.</td>
</tr>
<tr>

<td>Place in plastic bags or plastic container and store in crisper.</td>
</tr>
<tr>
<td>Fish</td>
<td>Freeze fresh fish and shellfish if they are not being eaten the same day purchased. Eating fresh fish and shellfish the same day purchased is recommended.</td>
</tr>
<tr>
<td>Leftovers</td>
<td>Cover leftovers with plastic wrap or aluminum foil, or store in plastic containers with tight lids.</td>
</tr>
</tbody>
</table>
Storing Frozen Food
Check a freezer guide or a reliable cookbook for further information about preparing food for freezing or food storage times.

Freezing
Your freezer will not quick-freeze a large quantity of food. Do not put more unfrozen food into the freezer than will freeze within 24 hours (no more than 2 to 3 pounds of food per cubic foot of freezer space). Leave enough space in the freezer for air to circulate around packages. Be careful to leave enough room at the front so the door can close tightly.

Storage times will vary according to the quality and type of food, the type of packaging or wrap used (how airtight and moisture-proof) and the storage temperature. Ice crystals inside a sealed package are normal. This simply means that moisture in the food and air inside the package have condensed, creating ice crystals.

NOTE
• Allow hot foods to cool at room temperature for 30 minutes, and then package and freeze. Cooling hot foods before freezing saves energy.

Packaging
Successful freezing depends on correct packaging. When you close and seal the package, it must not allow air or moisture in or out. If it does, you could have food odor and taste transfer throughout the refrigerator and could also dry out frozen food.

Packaging recommendations
• Rigid plastic containers with tight-fitting lids
• Straight-sided canning/freezing jars
• Heavy-duty aluminum foil
• Plastic-coated paper
• Non-permeable plastic wraps
• Specified freezer-grade self-sealing plastic bags
Follow package or container instructions for proper freezing methods.

Do not use
• Bread wrappers
• Non-polyethylene plastic containers
• Containers without tight lids
• Wax paper or wax-coated freezer wrap
• Thin, semi-permeable wrap

Humidity Controlled Crispers (On Some Models)
The crispers provide fresher tasting fruit and vegetables by letting you easily control humidity inside the drawer.

You can control the amount of humidity in the moisture-sealed crispers by adjusting the control to any setting between Vegetables and Fruit.
• Vegetables keeps moist air in the crisper for best storage of fresh, leafy vegetables.
• Fruit lets moist air out of the crisper for best storage of fruit.

Durabase®
The Durabase® divider allows you to organize the Durabase® area into sections. It can be adjusted from side to side to accommodate items of different sizes.

WARNING
• If the Durabase® divider is removed, there is enough open space for children or pets to crawl inside. To prevent accidental child and pet entrapment or suffocation risk, DO NOT allow children or pets to touch or go near the drawer.
**Glide‘N’Serve (On Some Models)**

The Glide‘N’Serve provides storage space with a variable temperature control that can keep the compartment at a slightly different temperature than the refrigerator section. This drawer can be used for large party trays, deli items and beverages. (This drawer should not be used to store vegetables that require high humidity.)

Press the Select button to choose between **Produce** (Cold), **Deli** (Colder) and **Meat** (Coldest).

---

**Detaching/Assembling the Storage Bins**

Some bins may vary in appearance and will only fit in one location.

**Glide‘N’Serve and Crispers**

1. To remove the humidity controlled crispers and the Glide‘N’Serve, pull out the crisper (1) or Glide‘N’Serve (2) to full extension, lift the front up, and pull straight out.

2. To install, slightly tilt up the front, insert the crisper or drawer into the frame and push it back into place.

---

**Crisper Cover**

To remove, lift the front of the cover up until it detaches from the back wall of the cabinet, then pull it out.

---

**Door Bins**

The door bins are removable for easy cleaning and adjustment.

1. To remove the bin, simply lift the bin up and pull straight out.

2. To replace the bin, slide it in above the desired support and push down until it snaps into place.

---

**CAUTION**

- Regularly detach and wash the storage bins and shelves; they can become easily contaminated by food.
- Do not apply excessive force while detaching or assembling the storage bins.
- Do not use the dishwasher to clean the storage bins and shelves.
Adjusting the Refrigerator Shelves
The shelves in the refrigerator are adjustable to meet individual storage needs. Your model may have full or split shelves. Adjusting the shelves to fit items of different heights will make finding the exact item you want easier.

Detaching the Shelf
(Half Shelf Type)
1 Tilt up the front of the shelf and then lift the shelf straight up.
2 Pull the shelf out.

Assembling the Shelf
(Half Shelf Type)
1 Tilt the front of the shelf up and guide the shelf hooks into the slots at a desired height.
2 Lower the front of the shelf so that the hooks drop into the slots.

CAUTION
• Make sure that shelves are level from one side to the other. Failure to do so may result in the shelf falling or spilled food.
• Do not clean glass shelves with warm water while they are cold. Shelves may break if exposed to sudden temperature changes or impact.
• Glass shelves are heavy. Use special care when removing them.

Using the Folding Shelf (On Some Models)
Store taller items, such as a gallon container or bottles, by pushing the front half of the shelf underneath the back half of the shelf. Pull the front of the shelf forward to return to a full shelf.

CAUTION
• Glass shelves are heavy. Use special care when removing them.
• Do not clean glass shelves with warm water while they are cold. Shelves may break if exposed to sudden temperature changes or impact.
SMART FUNCTIONS

Smart Diagnosis™ Function

Should you experience any problems with the appliance, it has the capability of transmitting data via your telephone to the LG Customer Information Center. NFC or Wi-Fi equipped models can also transmit data to a smartphone using the LG SmartThinQ application.

Smart Diagnosis™ through the Customer Information Center

• For appliances with the or logo

This method allows you to speak directly to our trained specialists. The specialist records the data transmitted from the appliance and uses it to analyze the issue, providing a fast and effective diagnosis.

1 Call the LG Electronics Customer Information Center at:
   (LG U.S.A.) 1-800-243-0000
   (LG Canada) 1-888-542-2623

2 Open the right refrigerator door.

3 Hold the mouthpiece of your phone in front of the speaker that is located on the right hinge of the refrigerator door, when instructed to do so by the call center.

4 Press and hold the Freezer button for three seconds while continuing to hold your phone to the speaker.

5 After you hear three beeps, release the Freezer button.

6 Keep the phone in place until the tone transmission has finished. The display will count down the time. Once the countdown is over and the tones have stopped, resume your conversation with the specialist, who will then be able to assist you in using the information transmitted for analysis.

NOTE

• For best results, do not move the phone while the tones are being transmitted.
• If the call center agent is not able to get an accurate recording of the data, you may be asked to try again.
• The Smart Diagnosis™ function depends on the local call quality.
• Bad call quality may result in poor data transmission from your phone to the call center, which could cause Smart Diagnosis™ to malfunction.

LG SmartThinQ Smart Diagnosis™

• For appliances with the or logo

Use the Smart Diagnosis feature in the LG SmartThinQ application for help diagnosing issues with the appliance without the assistance of the LG Customer Information Center.

Follow the instructions in the LG SmartThinQ application to perform a Smart Diagnosis using your smartphone.
MAINTENANCE

Cleaning

**WARNING**
- Use non-flammable cleaner. Failure to do so can result in fire, explosion, or death.

**CAUTION**
- Do not use an abrasive cloth or sponge when cleaning the interior and exterior of the refrigerator.
- Do not place your hand on the bottom surface of the refrigerator when opening and closing the doors.
- When lifting the hinge free of the latch, be careful that the door does not fall forward.

General Cleaning Tips
- Both the refrigerator and freezer sections defrost automatically; however, clean both sections once a month to prevent odors.
- Wipe up spills immediately.
- Unplug the refrigerator or disconnect power before cleaning.
- Remove all removable parts, such as shelves.
- Use a clean sponge or soft cloth and a mild detergent in warm water. Do not use abrasive or harsh cleaners.
- Hand wash, rinse and dry all surfaces thoroughly.
- When cleaning the inside or outside of the appliance, do not wipe it with a rough brush, toothpaste, or flammable materials. Do not use cleaning agents containing flammable substances.
  - This may cause discoloration or damage to the appliance.
  - Flammable substances: alcohol (ethanol, methanol, isopropyl alcohol, isobutyl alcohol, etc.), thinner, bleach, benzene, flammable liquid, abrasive, etc.

Exterior
Waxing external painted metal surfaces helps provide rust protection. Do not wax plastic parts. Wax painted metal surfaces at least twice a year using appliance wax (or auto paste wax). Apply wax with a clean, soft cloth.

For products with black stainless steel exterior, spray glass cleaner on a clean, microfiber cloth and rub in direction of grain. Do not spray glass cleaner directly at the display panel. Do not use harsh or abrasive cleaners.

For products with a standard stainless steel exterior, use a damp microfiber cloth and rub in the direction of the grain. Dry with a paper towel to avoid streaks. For stubborn stains and fingerprints, use a few drops of liquid dish soap in water, and rinse with hot water before drying. Do not use abrasive or harsh cleaners.

Inside Walls
- Allow freezer to warm up so the cloth will not stick.

To help remove odors, wash the inside of the refrigerator with a mixture of baking soda and warm water. Mix 2 tablespoons of baking soda to 1 quart of water (26 g soda to 1 liter water.) Be sure the baking soda is completely dissolved so it does not scratch the surfaces of the refrigerator.

Door Liners and Gaskets
Use a clean sponge or soft cloth and a mild detergent in warm water. Do not use cleaning waxes, concentrated detergents, bleaches, or cleaners containing petroleum on plastic refrigerator parts.

Plastic Parts (covers and panels)
Use a clean sponge or soft cloth and a mild detergent in warm water. Do not use glass cleaners, abrasive cleansers, or flammable fluids. These can scratch or damage the material.

Condenser Coils
Use a vacuum cleaner with a brush or crevice attachment to clean the condenser cover and vents. Do not remove the panel covering the condenser coil area.
Replacing the Fresh Air Filter
Replace the Fresh Air Filter:
- Approximately every six months.
- When the Replace Filter icon turns on.

1 Hold and remove the filter cover by rotating it counterclockwise until the hooks are separated completely.

2 Remove the filter from the cover. Place the new filter inside of the cover with the side that says Front facing outward.

3 Hold and refit the air filter cover by rotating it clockwise until the hooks are engaged completely.

4 Press and hold the Fresh Air Filter button for three seconds to reset the filter sensor.

Replacing the Water Filter
Replace the Water Filter:
- Approximately every six months.
- When the Replace Filter icon turns on.
- When the water dispenser output decreases.

BeforeReplacing the Water Filter:
If the top shelf, located below the water filter, is in the highest position, it will need to be removed prior to replacing the water filter.

To remove any shelf: Tilt up the front of the shelf (1) and lift (2). Pull the shelf out.

1 Remove the old water filter. Lower or remove the top left shelf to allow the water filter to rotate all the way down. Pinch the sides to open the water filter cover.

NOTE
- Replacing the water filter causes a small amount of water (around 1 oz. or 25 cc) to drain.
- Wrap a cloth around the front end of the water filter cover to collect any leaking water. Hold the water filter upright, once it is removed, to prevent any remaining water from spilling out of the water filter.
2 Pull the water filter downward and turn it counterclockwise before pulling it out. Make sure to rotate the filter down completely before pulling it out of the manifold hole.

3 Replace with a new water filter.
   Take the new water filter out of its packing and remove the protective cover from the o-rings. With the water filter tabs in the horizontal position, push the new water filter into the manifold hole and turn it clockwise until it stops.

4 Close the water filter cover. The cover will click when closed correctly.

5 After the water filter is replaced, dispense 2.5 gallons of water (flush for approximately 5 minutes) to remove trapped air and contaminants from the system.

NOTE
• Do not dispense the entire 2.5 gallon amount continuously. Press and release the dispenser pad for cycles of 30 seconds ON and 60 seconds OFF.

6 After changing the filter, press and hold the Water Filter button for three seconds to reset the indicator light.

NOTE
To purchase a replacement water filter:
• Visit your local dealer or distributor
• Search using "water filter" on lg.com
• Use replacement cartridge: ADQ747935**

For further assistance, call:
1-800-243-0000 (USA)
1-888-542-2623 (Canada)

<td>200 gallons (757 liters)</td>
</tr>
</tbody>
</table>

It is essential that the manufacturer’s recommended installation, maintenance and filter replacement requirements be carried out for the product to perform as advertised.

### NOTE
- While the testing was performed under standard laboratory conditions, actual performance may vary.

Replacement Cartridge: **LT1000P ADQ747935**
For replacement filters, visit your local dealer or distributor or search under "water filters" on the [lg.com](http://lg.com) website.

For further assistance, contact the LG Electronics Customer Information Center.
USA: 1-800-243-0000

### WARNING
To reduce the risk associated with choking:
- Do not allow children under 3 years of age to have access to small parts during the installation of this product.

To reduce the risk associated with the ingestion of contaminants:
- Do not use with water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system. Systems certified for cyst reduction may be used on disinfected water that may contain filterable cysts. EPA Establishment # 070595-MEX-001

### CAUTION
To reduce the risk associated with property damage due to water leakage:
- Read and follow Use Instructions before installation and use of this system.
- Installation and use MUST comply with all state and local plumbing codes.
- Do not install if water pressure exceeds 120 psi (827 kPa). If your water pressure exceeds 80 psi, you must install a pressure limiting valve. Contact a plumber if uncertain how to check your water pressure.
- Do not install where water hammer conditions may occur. If water hammer conditions exist you must install a water hammer arrester. Contact a plumbing professional if you are uncertain how to check for this condition.
- Do not install on hot water supply lines. The maximum operating water temperature of this filter system is 100 °F (37.8 °C).
- Protect filter from freezing. Drain filter when temperatures drop below 40 °F (4.4 °C).
- The disposable filter cartridge MUST be replaced every 6 months, at the rated capacity or if a noticeable reduction in flow rate occurs.
- Protect from freezing, remove filter cartridge when temperatures are expected to drop below 33 °F.
- Do not install systems in areas where ambient temperatures may go above 110 °F (43.3 °C).
- Where a backflow prevention device is installed on a water system, a device for controlling pressure due to thermal expansion must be installed.
- Ensure all tubing and fittings are secure and free of leaks.
