

Prior to Purchase

- Building construction experience is required to assemble this building package. It is recommended that a professional contractor be hired to construct if the purchaser is not qualified.
- Check with your local building official or Code Enforcement Office to obtain necessary permits and review possible site zoning, foundation and building requirements or restrictions (including, but not limited to: frost depth, soil-bearing pressure, drainage, etc.).
- Ensure that the building requirements meet design specifications of building package (wind, seismic, snow load, exposure).
- In some cases, engineering criteria (such as frost depth) required for your build site may warrant a foundation plan different from the standard. In this case, Barn Pros will provide engineering suitable to your build site.
- Check with local organizations such as HOA, Coastal Commissions and Architectural Control Committee for approval process and restrictions (if required).

Purchase Sequence of Events

- Place your order online with The Home Depot
- Receive engineered blueprints and calculations packet
