UNRIVALED PERFORMANCE

With a unique combination of raw materials and cutting-edge technological processes, Dekton® is the first product of its kind that outperforms all other countertop materials.

Maximum Resistance

Scratch Resistant

WHY CHOOSE DEKTON[®]?

Superior Resistance

Unlike most porcelain surfaces which have separate body and surface layers, Dekton is made of the same high quality raw materials throughout the entire slab. This gives Dekton added strength and makes it more resistant to scratching, breaking and staining.

No Need to Mitre

Since Dekton is a 2cm surface, there is no need to mitre the edge. This leads to significant savings over thinner materials with costly material and labor upcharges.

Innovative Designs

The design team behind Dekton has worked with industry leaders to develop fashion forward colors that emulate the look of exotic natural stone and other high end materials for a fraction of the cost.
