

Follow these instructions for connecting IP cameras to the same network as your NVR.

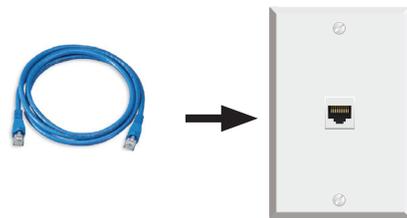

You will also need:

- A network port that is connected to the same router used by your NVR
- A power outlet

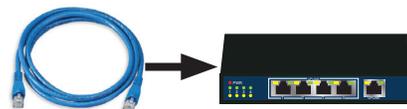

STEP 1

Plug the CAT5e network cable into a network port connected to the same router used by your NVR. *(picture 1)*

STEP 2

Plug the other end of the CAT5e network cable into the port on the POE Injector labelled **Data In** or **Uplink**. *(picture 2)*

STEP 3

Connect the power supply to the POE Injector and plug it into a power outlet.

IMPORTANT!: Do not connect the power supply directly to the camera!

STEP 4

Right-click with the mouse to open the **Control Bar** at the bottom left of the screen. *(picture 3)*

STEP 5

Click on the **Main Menu** icon. *(picture 4)*

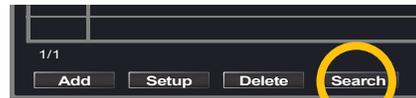

STEP 6

Click on **IP Camera**. *(picture 5)*

STEP 7

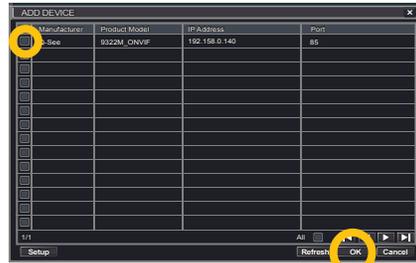

Click **Search**. (picture 6)

PICTURE 6

STEP 8

Select one or more cameras by checking the box(es) to the left. (picture 7)

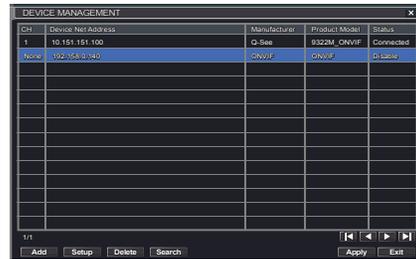

PICTURE 7

STEP 9

Click **OK**. (picture 7)

STEP 10

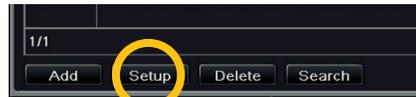

Select the camera (it will highlight in blue) in the Device Management window. It will show "Disable" in the **Status** column on the left. (picture 8)

PICTURE 8

STEP 11

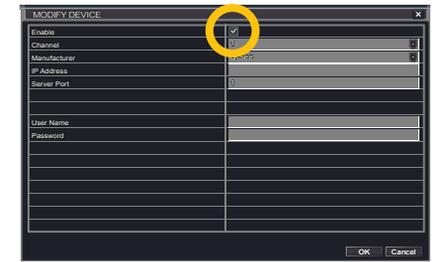

Click **Setup** at the bottom of the window. (picture 9)

PICTURE 9

STEP 12

Make sure that the **Enable** box is checked. (picture 10)

PICTURE 10

STEP 13

Enter the **User Name** and **Password** for the camera. (picture 10) This information is found in the camera's manual.

STEP 14

Click **OK**.

You should now see video from that camera.

PICTURE 11

NOTE: Q-See's QTN-series cameras will automatically display video in the first available channel. Other brands or series cameras keep the following in mind:

- The camera will need to have DHCP enabled
- The camera will need to be ONVIF compliant
- Q-See cannot guarantee that all third party cameras will be compatible, or that all features (motion detection, recording, etc.) will operate normally.
- Consult your camera's manual for assistance with any of these points.
