TROUBLESHOOTING

• Rice is too dry/hard after cooking

If your rice is dry or hard/chewy when the cooker switches to **Keep Warm**, additional water and cooking time will soften the rice. Depending on how dry your rice is, add ½ to 1 cup of water and stir thoroughly. Close the lid and press the **White Rice** button. When cooker switches to **Keep Warm** mode, open the lid and stir the rice to check the consistency. Repeat as necessary until rice is soft and moist.

• Rice is too moist/soggy after cooking

If your rice is still too moist or soggy when the cooker switches to **Keep Warm**, use the serving spatula to stir the rice. This will redistribute the bottom (moistest) part of the rice as well as release excess moisture. Close the lid and allow to remain on **Keep Warm** mode for 10-30 minutes as needed, opening the lid and stirring periodically to release excess moisture.

Note:

- Do not use harsh abrasive cleaners, scouring pads or products that are not considered safe to use on nonstick coatings.
- If washing in the dishwasher, a slight discoloration to the inner pot and accessories may occur. This is only cosmetic and will not affect performance.
- Any other servicing should be performed by Aroma® Housewares.

Helpful Hints:

The provided rice cooker cup is the equivalent to a 3/4 standard US cup.

Note:

- Because rice varieties may vary in their make-up, results may differ. Here are some troubleshooting tips to help you achieve the desired consistency.

COOKING RICE

1. Using the provided measuring cup, add rice to the inner pot.
2. Rinse rice to remove excess starch then drain.
3. Fill with water to the line which matches the number of cups of rice being cooked.
4. Place the inner pot into the cooker.
5. Close the lid securely.
6. Plug the power cord into an available 120V AC wall outlet.
7. Press the (⏻) button to turn on the cooker.
8. Press **White Rice** or **Brown Rice**.
9. The cooker will now begin cooking. The cooking indicator light will illuminate and the display will show a chasing pattern.
10. The cooker will count down the final 10 minutes of cook time.
11. Once rice is finished, the cooker will beep and automatically switch to **Keep Warm**.
12. For better results, stir the rice with the serving spatula to distribute any remaining moisture.
13. When finished serving rice, turn the cooker off by pressing (⏻) twice and unplug the power cord.

.....

Note:

- Before placing the inner pot into the cooker, check that it is dry and free of debris. Adding the inner pot when wet may damage the cooker.
- Brown rice requires a much longer cooking cycle than other rice varieties due to the extra bran layers on the grains. The **Brown Rice** function on this cooker allows extra time and adjusted heat settings in order to cook the rice properly. If it appears the cooker is not heating up immediately on the **Brown Rice** setting, this is due to a low-heat soak cycle that precedes the cooking cycle to produce better brown rice results.
- Rice should not be left in the cooker on **Keep Warm** for more than 12 hours.

Helpful Hints:

If you misplace the measuring cup, a $\frac{3}{4}$ standard US cup is an exact replacement.

To add more flavor to rice, try substituting a favorite meat or vegetable broth or stock. The ratio of broth/stock to rice will be the same as water to rice.

For approximate rice cooking times and suggested rice/water ratios, see the "Rice & Water Measurement Table" on page 8.

SMARTCARB

1. Using the provided measuring cup, add rice to the Carb-Reducing Pot.

4. Fill with water to the line which matches the number of cups of rice being cooked.
5. Plug the power cord into an available 120V AC wall outlet.
6. Press the (⏻) button to turn on the cooker.

9. When water reaches a boil, the cooker will count down from the time setting.
10. Once rice is finished, the cooker will beep and automatically switch to **Keep Warm**.
11. For better results, stir the rice with the serving spatula to distribute any remaining moisture.
12. When finished serving rice, turn the cooker off by pressing (⏻) twice and unplug the power cord.

How does the SmartCarb function work?

1. In the Carb-Reducing Pot, rice is submerged in water when it begins cooking.
2. While cooking, boiling water breaks down all easily-dissolvable starch molecules. Starchy water drains below through holes in the Carb-Reducing Pot.
3. Rice finishes cooking by being steamed instead of sitting in starchy water and reabsorbing carbohydrates.
.....

Note:

- Rinse rice before placing it into the inner pot to remove excess bran and starch. This will help reduce browning and sticking to the bottom of the pot.
- Want perfect brown rice without the wait? Use the **Delay Timer**. Simply add rice and water in the morning and set the **Delay Timer** for when rice will be needed that night. See "Using Delay Timer" on page 10 for more details.

For best results, it is recommended to puncture small holes in the paper/foil.
