

ADVANTAGES TO USING INVERTER GENERATORS WITH PARALLEL PORTS

4,400 Surge Watt
Dual Fuel Inverter Generator
Parallel Combo Kit

GEN22KIT30

- A** 30 Amp Parallel Cable
- B** 2,200 Surge Watts
1,800 Running Watts
- C** 2,200 Surge Watts
1,800 Running Watts

1 Portable inverter generators are great for Travel Trailers and RV's

When combined, these generators provide up to 30 amps, so you can power more items. For example, AC units on an RV typically pull 14-18 amps. When using two parallel port capable generators, you can power the AC plus a microwave!

2 Smaller, suitcase style generators are easier to carry and store

A 2000 watt generator can weigh up to 50 lbs, making it easy for one person to carry alone. Compare that to a single 4000 watt generator that weighs almost 100 lbs.

3 Two generators with Parallel Ports give you more flexibility

Use just one generator when light duty power is needed, or tether the two generators together when you need heavy duty power.

4 Having two generators provides you with a backup if one runs out of fuel

Be prepared in an emergency - have two small portable generators on hand instead of one heavy generator, in case one runs out of LP or unleaded gas.

5 Inverter generators provide stable, clean power

Inverter generators provide sine wave power, which is a more refined, stable electrical output for your home and RV electronics. They are also quieter and more fuel efficient than other generators.
