GAME SET-UP

Build the starting tower on a flat, stable surface by placing three blocks evenly alongside one another. Place another three blocks on top of those, at a 90-degree angle to the first level, forming an even, solid second level (see Figure 1). Continue stacking the blocks in sets of three, alternating the direction of each level, until all the blocks are stacked into a 24-story tower.

PLAYING EQUIPMENT

- 72 wooden blocks

GAME PLAY

Players take turns removing blocks, one at a time, from the lower levels of the tower and using them to build a new top level. The structure becomes increasingly taller and more precarious as players build it as high as possible before the tower falls over.

The first player carefully removes one block from anywhere below the top level by either sliding or tapping it out of position. Then, using one hand only, they remove the block and add it to the top of the tower at a 90 degree angle to the blocks below it.

Proceeding clockwise, each player repeats this process, removing and stacking one block per turn. Place no more than three blocks on each level and complete each three-block level before building the next. Continue taking turns until one player causes the tower to topple. The last player to stack a block on top of the tower without knocking it over wins the game.

WARNING: Drilling, sawing, sanding, or machining wood products generates wood dust, a substance known to the State of California to cause cancer. Avoid inhaling dust generated from wood products or use a dust mask or other safeguards to avoid inhaling dust from wood products. Wood products emit chemicals known to the State of California to cause birth defects or other reproductive harm.
