

Granite Round Fire Pit Installation Instructions

Step 1: Level the pad. Level a 40" circular area of gravel or rock on compacted soil.

Step 2: Install first row of granite blocks (10 units). Layout the blocks in a circle as shown with the inside diameter (approximately 23"). Level the blocks from front to back and side to side. Blocks may need to be shifted slightly in order to get a tight fit between all the blocks on the first course.

Step 3: Install second row of granite blocks (10 units). Place the first block on top of the bottom block staggering the intersection of two blocks on the row below. Continue around the circle making slight adjustments as needed so that the edge of the blocks fit tightly in the circle. Remove one block at a time from the second course and glue to the two blocks below using quarter-sized dabs of concrete adhesive.

Step 4: Install the remaining 7 rows. Place the blocks in the same manner as Step 2, each row staggering the joints of the blocks below. After making any adjustments to each row, remove one block at a time and glue to the two blocks below using quarter-sized dabs of concrete adhesive. Installation is complete – Enjoy!

Important Product Information

The granite blocks are natural aggregates so color variation is normal. Keep the fire inside of the fire pit as the granite can become warm to the touch. For more information contact us at www.naturalconcreteproducts.com.
