

CARE AND MAINTENANCE ON PLASTIC FURNITURE

Polycarbonate Resin must be washed carefully to prevent scratching:

- DO NOT use abrasive cleaners or cleaners with chemicals in them
- Use a microfiber cloth (or other high-quality lint-free cloth) and clear water for normal cleaning
- If heavier cleaning is required, a mild soap can be used along with the cloth and water
- After cleaning: rinse with warm water and wipe clean with a soft cloth

Notice:

- These chairs have a surface, and inherent properties that don't hold onto dirt and grime, simply rinsing with water and wiping with a clean cloth on a regular basis will keep these chairs clean.
- Alternatively, after extended periods of time outside, or in dirty weather, a cleaning with a mild soapy solution and water, finishing by wiping off with a clean cloth will present your chairs in the same condition as when they were new.
- These 3D Plastic chairs can be used full-time outdoors. They are built specifically to handle all the harsh outdoor environment can offer.

With care and attention your product will give you many years of enjoyment!
