

Stromanthe Triostar Care

Light

The Triostar prefers indirect bright light. The more indirect light it receives, the more variegation its leaves will reveal. Avoid direct sunlight as this may cause damage to its foliage.

Water

The Triostar prefers a tad damp soil. Allow the top inch of the soil to dry out before watering again. Do not overwater.

Temperature

Prefers temperatures of 60-80 degrees Fahrenheit. Extreme cold or frost will cause foliage damage

Feeding

Dilute a general-purpose fertilizer water-soluble to half strength and fertilize monthly during the Spring to Fall months
