

Evaporative Air Coolers

The Whirlpool 155 CFM indoor evaporative air cooler offers an effective, low cost cooling option in areas with dry heat, such as the southwest region of the United States. The low power consumption of a mere 70 watts will save you a noteworthy amount on your energy bill in comparison to the cost of running a standard air conditioner. This unit is designed for indoor use in open environments equipped with cross ventilation up to 309 square feet. Three fan speeds and automatic louvers evenly distribute cool air after it is sifted through the filter, providing a fresh, clean breeze throughout your room. Castor wheels and convenient handle allow for effortless movement between rooms. For those living in more humid climates, consider Whirlpool's portable air conditioning units or window air conditioners.
