Steps to install a Wall Mirror

1. On the back side of the mirror, use your pencil to mark the center point.
2. Measure the distance between the center point of the clips and write down the result.
3. Measure the distance from the center point and the right side clip. Repeat same with left side clip.
4. Hold the mirror against the wall where you want to install it, and mark the wall at the top edge of the mirror with your pencil.
5. Using the results from the Steps 2 and 3, measure down from the top edge mark to the center point between the clips and place another mark, then from that mark measure out to the center of the clip body on each side and mark the wall in both spots.
6. Drill two holes in the wall at the clip body center locations
7. Using your drill, insert the anchor bolts in the holes. Now install the screw in the anchor with your drill. Leave $\frac{1}{4}$ " of space between the wall and the screw head.
8. Hang the mirror on the wall by inserting the screw heads into the clips.

Tip: You can use double sided tap at the back of the mirror for more stabilization.
