Beckett’s Solar Air pump kit is designed to boost oxygen levels in outdoor ponds and fountains to keep fish and other aquatics healthy and happy.

PARTS INCLUDED:
1) Solar Panel with ground spike
2) Air Pump
3) Air Hose
4) Bubble Stone

Overview
The air pump is powered by the solar panel. In order for it to work best the panel should directly face the sun for as long as possible each day.

The performance of the air pump depends on the sunlight intensity and incident angle the sun strikes the panel

There is no on/off switch. The air pump turns on when there is enough sunlight striking the solar panel

Assembly
1) Roll out the air hose and the pump power cord
2) Connect the air hose to the bubble stone
3) Connect the other end of the air hose to the pump outlet barb
4) WARNING: The pump is not submersible so it should be placed in a dry and safe area near the pond.
5) Connect the ground spike pieces together and connect the spike to the back of the solar panel
6) Locate the panel directly facing the sun at mid-day
7) Insert the plug from the power cord into the pump
