

Kwikmesh is a multi-use screening material in conveniently sized rolls. Recommended uses include ventilation for new construction, vent repair, rodent and insect control, and tree trunk protection. Kwikmesh is made from 1/8 in. corrosion resistant galvanized expanded metal. Kwikmesh is a versatile addition to any toolbox.

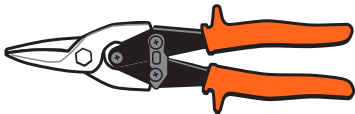

1. Remove the old or damaged vent. Using ordinary aviation shears cut a piece of Kwikmesh™ that is at least 1 inch larger than the hole you'll be covering.

2. Staple along the top with approximately 1 inch spacing, keeping the Kwikmesh smooth and flat. Continue with the sides and finish with the bottom.

Kwikmesh™ cuts easily with standard aviation shears. Ordinary scissors will not be strong enough.

Cutting Kwikmesh™ exposes many sharp points and the roll tension may cause it to spring back. **Always wear eye protection and gloves** when working with Kwikmesh™
