

WHAT SIZE CLOSER DO I NEED? - Pneumatic Storm Door Closer Replacement Guide

For best performance replace your pneumatic storm door closer with the same size and type (tube length, diameter & if it has a torsion bar) that the manufacturer originally supplied with your storm door.

The size of the door closer is determined by the thickness and weight of the storm door. Use the chart below to determine the best match for the door you have.

Each size of door closer can have a "Quick Hold" option which will automatically hold the door open at 55° and will release when pushed open further.

FOR DOORS UP TO 1-1/4" THICK
