

## 1 Extend (2 Methods)

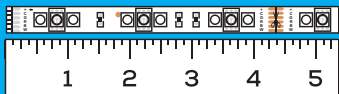

**IMPORTANT:** Requires PRISMA Strip Light Kit to function.

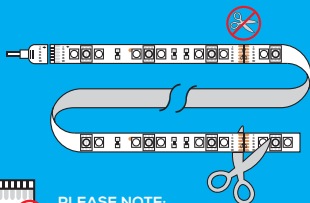

**Flex Connector:**  
Durable & bendable, perfect for corners.

**Direct Connector:**  
Perfect for simple extensions.

## 2 Measure & Cut

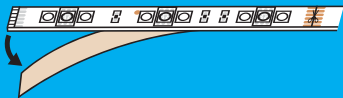

Measure the LED strip, and locate the closest cut mark to your desired length extension. Each strip has cut markings located every 10cm. Take a sharp pair of scissors or blade, and cut along the cut mark.

### PLEASE NOTE:

Do not cut from the front end of the strip light where the arrow is present (↗), cut from the opposite end. Also, extension will only work for uncut PRISMA Strip Light with both pin connectors intact.

## 3 Peel & Stick

Remove the protective film from the adhesive backing to mount the LED strip to the desired area. Ensure that the area has a clean, solid surface.

### Important Information:

Before installing, read and follow all precautions, including the following:

**CAUTION: RISK OF ELECTRIC SHOCK OR BURNS - USE IN A DRY LOCATION ONLY.** The weather resistant IP44 rating only protects the LED strip from splashes in any direction.  
**DO NOT IMMERSE IN WATER.**

**WARNING:** The LED strip must be unplugged when making any modifications to the device. Electrical currents are dangerous and may cause electrical shock, injury, or death (in some cases).
