

Universal Bird Feeder Pole Model #5107-4

Parts:

Pole Placement:

1. To prevent squirrels from jumping onto your feeder, try and locate it at least 12' from any wall, post, or tree. Also have the feeder hang from at least 4 ft from the ground. (Fig. 1)

Assembling the Pole:

1. Dig a hole approximately 12" deep. Place sleeve in hole and backfill. If you choose to drive the pole into the ground, use extra care and cushion the pole with a wooden block.
2. Assemble the four sections of poles and place into ground sleeve (Fig. 2).
3. If needed, select and assemble either the extension arm or flat bottom adapter. Use the extension arm for hanging-only bird feeders. These are feeders that cannot be placed directly on the pole. When using the extension arm, be sure the arm is completely separated on the tip of the pole. Use the flat bottom wood feeder adapter for the pole. Be sure to center the adapter on the feeder for proper balance on the pole.
