

CRYSTALLINE POOL SYSTEM™

CRYSTALLINE Pool System for a softer water

Chemical interaction of water, chlorine and Crystalline

Crystalline Pool System™ for a softer water

The main purpose of chlorine in your pool is to kill bacteria. Only 0.6ppm is required to accomplish this task successfully in a pool with a balanced pH level and controlled organic matters.

Why do manufacturers recommend chlorine levels of 1.5ppm and more?

A multitude of other suspended particles are present in your swimming pool water. Those residues are made up of organic and inorganic matters and can soil your pool water. They include algae, minerals and chloramines. The latter give the distinctive chlorine smell to the water and are the result of the reaction between free chlorine with nitrogenous matters introduced in the pool by the swimmers.

Free chlorine works on these particles by bleaching them to make them invisible but they are not eliminated. You have therefore a seemingly clean swimming pool water but nothing more. In order to reduce chlorine needs, Crystalline Pool System™ is taking action on various fronts. Its powerful algacide effect kills algae in their formative stages which reduces significantly the amount of algae that must be treated by chlorine.

Crystalline Pool System™ works on all suspended particles to bring them together so they can be caught by your pool filter.

Consequently, a much smaller quantity of residues has to be treated by chlorine - 0.6ppm of free chlorine is then enough for a proper treatment. Thanks to Crystalline Pool System™, you will save on chlorine and avoid buying many other products.

Crystalline Pool System™ helps stabilizing the pH level so the chlorine can work under the best possible conditions.

You will be able to maintain easily a pure swimming pool water by using Crystalline Pool System™ with a reduced quantity of chlorine combined with a regular cleaning of your pool filter (as recommended by the manufacturer).

A safe and well-known product!

CRYSTALLINE POOL SYSTEM™

FOR POOL AND SPA

CRYSTALLINE Pool System for a softer water

CRYSTALLINE H₂O™ is a great leap forward in the swimming pool water maintenance field as well as water quality for swimmers. You will see it when using it!

Let's try it and you'll see !

Calculate the capacity of your pool

Calculate the average depth of your pool with the following equation:

$$\frac{\text{depth at the deep end}}{\text{depth at the shallow end}} + 2 = \text{average depth}$$

SQUARE POOL OR RECTANGULAR POOL
length X width X average depth X 1000 = _____ liters

OVAL POOL; large diameter X small diameter X average depth X 785.4 = _____ liters

ROUND POOL
diameter X diameter X average depth X 785.4 = _____ liters

A little weekly measure of Crystalline Pool System will do just fine!
Only 4 grams are required for a 10 000 liter pool.

SAVE TIME AND MONEY!

the perfect and modern product for the maintenance of your pool.

Provides an exceptional clear and odorless water without causing irritations or damaging swimsuits.

CRYSTALLINE Pool System™

- Transforms quickly chlorine into a powerful bactericide and eliminates its drawbacks such as odors, eye and skin irritations, swimsuit damages, etc...
- Minimizes chlorine use to get safe water approved by the government (0.6 ppm is enough instead of the usual 1.5 ppm)
- Prevents chlorine evaporation, thus avoiding wastes.
- Reduces the time devoted to pool maintenance.
- Counteracts algae formation.
- Regulates pH so that it remains at a normal level. Corrosive problems and cloudy water will be avoided.
- Water clarifier helps the filter catch particles that normally would have stayed in the water.
- Replaces all the other products, except chlorine in full, in pool water with a normal alkalinity level (from 80 to 120 ppm) and pH level from 7.2 to 7.8.
- Makes you save time and money on products.

The results :

A soft and clean water that does not cause eye or skin irritations nor swimsuit damages.

A safe water for swimmers and pool equipments..

Less work and less expenses, more time to enjoy your pool.

No algae, safe and clear water Provides a guaranteed peace of mind.

CRYSTALLINE Pool System™ has many benefits over traditional products :

- Easy to use: a single measure of CRYSTALLINE POOL SYSTEM™ per week is required, while maintaining chlorine at 0.6 ppm (see instructions)
- Light to carry, easy to handle and to store; unbreakable container.
- Low toxicity; is handled without any danger, no risk of burns or explosion.
- Odorless and skin-friendly.
- Always efficient.
- Does not discolor pool liners and accessories when used as recommended.
- Does not bleach hair.

NO MORE ALGAECIDE, STABILIZER OR OTHER CHEMICAL PRODUCTS

A SINGLE MEASURE PER WEEK IS REQUIRED

CRYSTALLINE Pool System™

AN EFFICIENT CHLORINE REDUCER

AN EFFICIENT WATER CLARIFIER

A POWERFUL ALGAECIDE

A PH STABILIZER

CHLORINE REDUCER

THE LOWEST CONCENTRATION OF CHLORINE IS ENOUGH WITH THE USE OF CRYSTALLINE Pool System

Note 1: The product must be used in a normal water, i.e. within the parameters established for pool water.

Note 2: If chlorine concentration drops below the minimum detectable by the pH analysis kit, just add enough chlorine to increase the concentration of free chlorine at 1ppm. In those conditions, you are guaranteed to have safe water.
