MATERIAL

Our natural stone vessel sinks are very durable and available in granite, marble, onyx, sandstone, and limestone. Each of our stone sinks has unique coloring due to the natural variance within the stone slabs our sinks are cut from. We cut a large slab of stone into smaller blocks that are then hand-chiseled into rough vessel shapes. After the center has been removed and the hole for the drain has been cut, the surface of the stone sink receives a polished or honed finish, both of which are carefully done by hand.
