

# Toilet Fitment Guide for the ALPHA JX

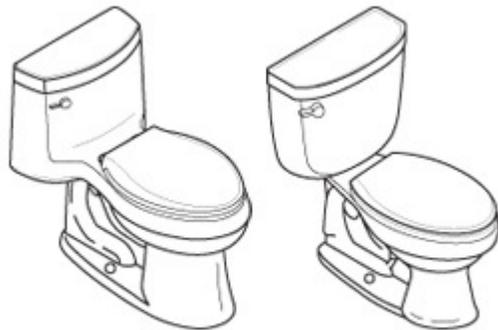

The ALPHA JX bidet toilet seat is designed to fit about 98% of residential toilets. Follow this guide to determine whether or not the ALPHA JX will fit your toilet and what size you require.

---

## One vs Two Piece Toilets

Two piece toilets feature the traditional design of separate tank and bowl pieces that have been bolted together. If you have a two piece toilet, great!

One piece toilets integrate the tank and bowl into a seamless, molded design. There are no gaps between the tank and bowl. If your one piece looks like the one pictured where the tank and bowl meet at a 90 degree angle with no curves, great!

One-Piece

Two-Piece

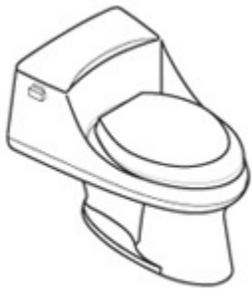

If your one piece toilet has a curved tank, please read the next section.

---

### Special One Piece Toilets: French Curves and Skirted Designs

If your one piece toilet has a curved tank with an elongated bowl like the image on the left, great! **The ALPHA JX should fit.**

Concealed

Skirted

If your one piece toilet has a curved tank, but with a short round bowl, contact us for your options. **The ALPHA JX may not fit.**

If you have a toilet with a skirted design like the image on the right, contact us. **The ALPHA JX will fit**, but you may need special mounting parts.

---

---

## Measuring Your Toilet Bowl

The Alpha JX will fit your toilet bowl if:

- The distance between the tank and the center of the toilet seat bolt holes is at least 1.5" (A)
- The distance between the toilet seat bolt holes is a standard 5.5" (B)

You will need an Elongated sized Alpha JX if measurement (C) is 18" or greater.

You will need a Round sized Alpha JX if measurement (C) is 17" or less.
