THANK YOU

We appreciate the trust and confidence you have placed in Glacier Bay through the purchase of this drinking water filtration system. We strive to continually create quality products designed to enhance your home. Visit us online to see our full line of products available for your home improvement needs. Thank you for choosing Glacier Bay!

USE AND CARE GUIDE
ULTIMATE DEFENSE DRINKING WATER FILTRATION SYSTEM

Questions, problems, missing parts? Before returning to the store, call Glacier Bay Customer Service 7 a.m. - 6 p.m., CST, Monday - Friday 1-800-247-1087 HOMEDEPOT.COM/GLACIERBAY System tested and certified by NSF International against NSF/ANSI Standards 42 & 53. See performance data sheet for details.

System tested and certified by WQA against NSF/ANSI Standards 42, 53 and USEPA microbiological guide for the reduction of the claims specified on the performance data sheet.

Thank you for choosing Glacier Bay!

Safety Information

Read all instructions before installing and using your home water filtration system. Follow all steps exactly to correctly install. Reading this manual will also help you to get all the benefits from the filtration system.

All plumbing must be completed in accordance with national, state and local plumbing codes. Local code information can be obtained at your local public works department. In Massachusetts, plumbing code 248 CMR 3.00 and 10.00 shall be adhered to. Consult with your licensed plumber.

WARNING: Do not use with water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system.

CAUTION: Do not install the filtration system outside, or in extreme hot or cold temperatures. Temperature of the water supply to the filtration system must be between 40°F and 100°F. Do not install on a hot water line.

NOTICE: This filtration system works on water pressures of 40 psi (minimum) to 100 psi (maximum). If your house water pressure is over the maximum, install a pressure reducing valve in the water supply pipe to the filtration system.

NOTICE: Commonwealth of Massachusetts plumbing codes do not permit the use of saddle valves and require installation by a licensed plumber. Comply with plumbing code 248-CMR for installations in the state of Massachusetts. Please consult your local plumber.

Warranty

GLACIER BAY WATER FILTRATION SYSTEMS - WARRANTY

Glacier Bay Water Filtration Systems are manufactured under the highest standards of quality and workmanship. Glacier Bay Water Filtration Systems warrants to the original purchaser that this system will be leak and drip free during normal domestic use for a period of one (1) year from date of purchase. If this system should ever develop a leak or drip Glacier Bay Water Filtration Systems will free of charge provide the parts necessary to put the system back in good working condition. A replacement for any defective part will be supplied free of charge for installation by the purchaser. Defects or damage caused by use of other than authorized parts are not covered by this warranty. This warranty shall be effective from date of purchase as shown on purchaser's receipt. Glacier Bay Water Filtration Systems shall be installed per the manufacturer’s installation instructions and specifications. Some states do not allow limitations on how long a warranty lasts, so the above limitation may not apply to you. This warranty is valid for the original purchaser only and excludes industrial, commercial, or business use of the product, product misuse, and product damage due to installation error, whether performed by a contractor, service company, or yourself. Glacier Bay Water Filtration Systems will not be responsible for labor charges or for damage incurred during installation, repair or replacement, nor for incidental or consequential damages. Some states, provinces and nations do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusions or limitations may not apply to you. Glacier Bay Water Filtration Systems will advise you of the procedure to follow in making warranty claims.

Simply write to Glacier Bay Water Filtration Systems at the address below. Explain the defect and include proof of purchase and your name, address and telephone number or you can also call us at 1-800-247-1087.

About This Filtration System

The Ultimate Defense Drinking Water Filtration System uses a dual filter configuration to remove undesirable elements in your water. These elements may include chlorine taste and odor, particulates, lead, virus, bacteria, cysts, and many organic compounds. At the same time, the system allows the minerals found in water to remain, for great tasting water. The filters in this system are designed to stop the flow of water when their capability to protect the user has been exhausted.

A performance data sheet is included listing what the system will reduce from the water supply. See the performance data sheet for individual contaminants and microbial reduction performance.

Installation Location

The drinking water system fits under the kitchen or bathroom sink. However, you can install it where it is most convenient. You need a COLD water supply pipe within a few feet (6 feet of tubing is included). You can purchase longer lengths of tubing if needed to reach more distant points. Be sure tubing is acceptable for use on potable water supplies.

Installation

1 Connecting the feed water supply fitting

NOTICE: Commonwealth of Massachusetts plumbing codes do not permit the use of saddle valves and require installation by a licensed plumber. Comply with plumbing code 248-CMR for installations in the state of Massachusetts. Please consult your local plumber.

Check and comply with local plumbing codes as you plan and install a cold feed (supply) water fitting. The fitting must provide a leak-tight connection to the water filter 3/8 in. tubing (D). A typical connection using the water supply fitting (B) is shown in Figure A. An optional connection using standard plumbing fittings (not included) is shown in Figure B.

Installation using the Fitting (Figure A):
- Close the cold water shut off valve that is immediately upstream of where you will install the feed water supply fitting. Open the faucet to drain water from the sink cold water pipe.
- Remove the nut that connects the cold water faucet to cold water plumbing.
- Thread the water supply fitting (B) onto the pipe and reconnect the nut to the bottom of the fitting.

Installation using Optional Pipe Fittings (compression type shown – Figure B):
- Close the cold water shut off valve that is immediately upstream of where you will install the feed water supply fitting. Open the faucet to drain water from the sink cold water pipe.
- Install a fitting on the cold water pipe to adapt to the 3/8 in. OD tubing.
- If threaded fittings are used, be sure to use pipe joint compound or thread sealing tape on outside threads.

Figure A

Figure B
Installation (continued)

2 Installing the faucet

**IMPORTANT:** To avoid damaging the sink, consult a qualified plumber or installer for drilling procedures in porcelain or stainless steel. Special drill bits are made for this.

Before you begin, ensure there is room underneath the sink or countertop so you can make the needed connections. If drilling is required in the sink top or countertop next to the sink, make a 1-1/4 in. dia. (minimum) hole for the faucet (C).

- Insert one end of the blue tube into the faucet (C) (see Step 3 – Connecting the tubes). Feed the other end of the blue tube through the mounting hole.
- Slide the toggle bolts through the mounting hole until the faucet (C) base is square against the mounting surface (sink or countertop). Tighten the toggle bolts to secure the base flat on the mounting surface. Do not over-tighten.
- Turn the faucet (C) 1/4 clockwise to attach the faucet (C) to the base.

3 Connecting the tubes

Remove and discard the protective foam plugs (if present) before connecting tubes.

- Allowing some slack, measure and cut a length of 3/8 in. tubing (D) to connect between the supply fitting and the filter system inlet. Cut the ends of the tubing square.
- Insert tubing all the way into the supply fitting and inlet fitting. Pull on the tubing to be sure that it is securely set in the fittings.
- Repeat the first two bullets to connect the tubing from the faucet to the filter system outlet.

**Tubing Connection (all push-in fittings):**

This system includes push-in fittings for quick tubing connections. If working with the fittings, do the following:

- Cut the end of the tubing square. Inspect the end (about 1 in.) of the tubing to be sure there are no nicks, scratches or other rough spots. If needed, cut the tubing again.
- Push tubing through the collet and through the fitting. Full engagement is 3/4 in. length of tube into the fitting. If tubing other than supplied with the system is used, be sure it is of high quality, exact size and roundness with a smooth surface.

To disconnect, push the collet inward and hold with a finger while pushing the tubing out:
Installation (continued)

4 Installing the filter cartridges

- Remove the plastic cap from the filter cartridges (E).
- Install the filter cartridges (E) into the two holes in the filter body. Note the filter cartridges are labeled Filter 1 and Filter 2. Turn clockwise to tighten. Do not over tighten.

5 Completing the installation

- Open the shutoff valve that you closed at the beginning of this installation.
- Open the filtered water faucet (C) to purge air from the system. When the water runs smooth with no bubbles or spurting close the faucet (C) and check the installation for leaks.
- Open the filtered water faucet (C) and let water run for 10 minutes to rinse system.

Filter Cartridges

FILTER CARTRIDGE LIFE

Lead, Chlorine Taste and Odor, and Purifying Filter Cartridges: Lead, chlorine taste and odor, and purifying filter cartridges contain activated carbon. When new, open the filtered water faucet and allow fine, carbon particles to purge from the cartridges. Flush for 10 minutes. It is recommended to replace filter cartridges every six months or 350 gallons of use. There are several variables that determine how long a cartridge will last. These include:

1. How much water you use, and
2. How much sediment, taste and/or odor, or other unwanted substance, is in the water.

Use the following information as a guide. However, no matter which type of filter cartridge you are using, you will know it is time to replace it when you first notice the return of the unwanted substance in your water.

Glacier Bay Ultimate Defense Water Filtration System model HDGMB4 with replacement elements HDGMBF4 conforms to NSF/ANSI 42 and 53 for the specific performance claims as verified and substantiated by test data. The rated capacity for this system is 350 gallons (1325 liters) at a rated service flow of 0.74 gallons per minute.

State of Wisconsin Required Statement: Do not use in Wisconsin with water that is microbiologically unsafe, or of unknown quality, without adequate point of entry (i.e. whole house) disinfection before this device.

FILTER CARTRIDGE REPLACEMENT

1. Turn the filter cartridges counterclockwise to remove and dispose of them properly.
2. Install the new filter cartridges by turning them clockwise.
3. Remove and replace the timer battery. See the Changing the Faucet Battery section for more information.

Lead, Chlorine Taste and Odor, and Purifying Filter Cartridges: Lead, chlorine taste and odor, and purifying filter cartridges contain activated carbon. When new, open the filtered water faucet and allow fine, carbon particles to purge from the cartridges. Flush for 10 minutes.

Turn filter cartridge clockwise to install

Turn filter cartridge counterclockwise to remove
Inside the faucet base is a battery-operated 6 month timer. An amber LED indicator is also located in the front of the faucet base. This LED flashes continuously after 6 months have passed. This indicates that it is time to replace the battery and filters.

**CHANGING THE FAUCET BATTERY**

To change the battery, complete the following steps:

1. Loosen the screw on the right side of the faucet base.
2. Press the battery housing upwards from the faucet base until it releases from the base.
3. Replace the battery (CR 2032 or equivalent). Place battery into the holder with the positive (+) side facing the back of the holder.
4. When the battery is first replaced, the light in the base will flash six times and turn off. This indicates the battery is fully charged. After the six flashes, the timer enters the 6 month time cycle. If it repeatedly flashes two times, the battery is weak and needs to be replaced.
5. Re-install the battery housing and firmly tighten the mounting screw.
Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>
<th>Probable Cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>There is either no or a decreased water flow.</td>
<td>The prefilter is clogged. Flow through the purifying filter will decrease and eventually clog when exposed to an excess of microbiological loading materials in the water. This failsafe feature reduces the chance of product use beyond its intended life, and will shut down the filter when it is exposed to contaminated water.</td>
<td>Replace the prefilter cartridge. Replace all filter cartridges.</td>
</tr>
<tr>
<td>The water tastes bad and has an odor.</td>
<td>The filters are expended.</td>
<td>Replace the filter cartridges.</td>
</tr>
<tr>
<td>Faucet LED indicator light does not function after a battery change.</td>
<td>The system is contaminated.</td>
<td>Sanitize the system. Call 1-800-247-1087 for instructions.</td>
</tr>
<tr>
<td>Water leaks at the push connect fittings.</td>
<td>The tubing is not pushed in all the way.</td>
<td>Push tubing in all the way into fittings.</td>
</tr>
<tr>
<td></td>
<td>The tubing is not cut square.</td>
<td>Cut the tubing square.</td>
</tr>
<tr>
<td></td>
<td>The tubing is nicked.</td>
<td>Remove the nicked portion and reinsert the tubing into the fitting.</td>
</tr>
<tr>
<td></td>
<td>The outer tubing surface is not smooth.</td>
<td>Remove the rough portion, and reinsert the tubing into the fitting.</td>
