UBNETUNIV-12	

\*You will use the same amount of straps, pole caps, as the amount of poles you have on the enclosure of your trampoline.

**Tip To Measure Your Frame Size:**

Measure your frame from one outside edge vertically and horizontally to the other outside edge so you get the correct measurements.

## > Steps to connect bottom of the net

**Note:** Make sure to align the net correctly, so that the entrance to the trampoline should be between two poles.

- 1.** Connect the net to the V-rings of the trampoline mat using the attached clips, securing at regular intervals. This holds the net in place for you to complete the attachment with rope.
- 2.** Secure one end of the rope by knotting it to the V-ring closest on one side to the trampoline entrance zipper.
- 3.** Weave the rope through the net and every second v-ring successively, moving around the trampoline in the direction away from the entrance zipper.
- 4.** When you complete the weaving and reach the other side of the entrance zipper, secure the other end of the rope also by knotting it to the V-ring closest to the entrance on that side.

Your trampoline safety net is now fully secured. Follow the safety checks in the 'Testing the Trampoline' section before using the trampoline net.

## ► Steps to connect top of the net

### Step 1 Insert the Pole Cap

**Note:** This step is only required if you have straight or curved poles. Skip this step if you have arched poles.

Measure the diameter of your pole to determine what size pole caps you need to use. If your poles measure 1", place the size 1" pole caps on top of the trampoline poles. If the poles measure 1.5" then use the 1.5" pole caps. (You only need to use your size pole caps, you do not need to use all of them.)

### Step 2 Adjust Strap

Insert a strap through a stitched hole on top of the net then pull the strap through the "O" shaped part of the pole cap. Continue by adjusting the buckle of the strap. Refer to fig. 1.

If your trampoline has arches, then look at the figure 2 to see how to adjust the straps around the poles of the arches.

Fig. 1

Fig. 2

### Step 3 Remove Sagging

Continue to the next pole. Make sure to stretch the net as much as you can to avoid sagging.

### Step 4 Insert Strap to all poles

Repeat step to all poles as shown in fig.

Poles

Arches

# REPLACEMENT PARTS LIST

If you need to replace any part of your trampoline, you can look for the Upper Bounce parts list below for each item model name :

SIZE	JUMPING MATS  Example UBMAT-7.5 (Frame size) -42 (Amt of springs) -5.5 (Spring size)	SAFETY PADS  Example UBPAD-S (Super) -7.5(Frame size) -B(Blue) / P(Premium) / G(Green) / BG(Blue Green)	SAFETY NETS				WEATHER COVERS  Black Example UBWC-12(Frame size) -BK(Black)	Blue Example UBWC-14(Frame size) -BL(Blue)
