Natures Composites' products are engineered to be the highest quality composite wood substitute products on the market today. We use a process that respects the environment for generations to come. Natures Composites uses wheat straw as a superior form of cellulose rather than wood for its natural fiber. Wheat straw is annually produced whereas trees require decades to harvest and harvesting forests are known to adversely impact ecosystems. Recycled plastics are incorporated into our product for strength and durability keeping this valuable resource from clogging up our ecosystems and our landfills.

eco-friendly products made from wheat straw and recycled hdpe plastics

REMOVING FOOTPRINTS FROM OUR WORLD™

Natures Composites' products are manufactured in the U.S.A. and are distributed through retail and wholesale channels throughout United States, Canada, Mexico, and Europe. Learn more about Natures Composites and our product lines by visiting www.naturescomposites.com today.
