GridMarX® Gypsum Board

National 
Gypsum®

Description

National Gypsum's patented GridMarX® installation guide marks are printed on the paper surface and come standard on all gypsum board products. These guide marks align with standard building dimensions and help to quickly identify fastener lines for studs and joist framing. Accurate cuts can be made without having to draw lines.

GridMarX increases productivity and profitability every step of the way. When fastening for code, the guidemarks help to quickly identify fastener patterns, virtually eliminating the need to measure between fasteners. Plus, cleaner fastener patterns provide a visual benefit for inspectors, which makes inspections much faster and smoother. Contractors save time and money every step of the way.

With GridMarX, guide marks run along the board lengthwise every 4 inches in both tapers and at 16 in., 24 in. and 32 in. o.c. The GridMarX are visible even in the low light conditions of the typical jobsite, yet cover easily with no bleed-through using standard paint products.

Save time and labor costs with Gold Bond BRAND GridMarX Gypsum Board.

Features/Benefits

■ Vertical Application –

In a vertical application, GridMarX serve as a guide mark to help identify the exact location of framing members behind the gypsum board eliminating the need for field applied vertical lines.

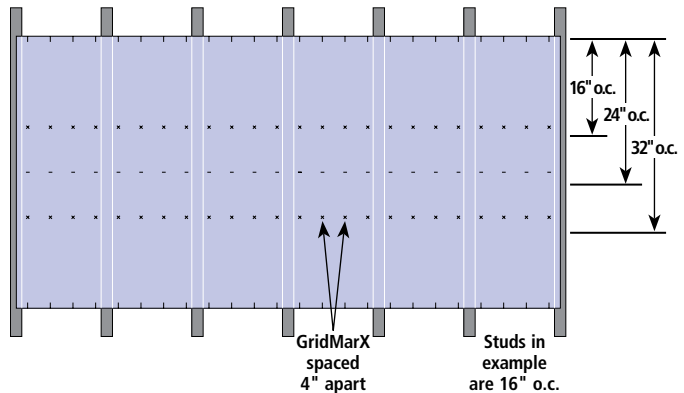

■ Horizontal Application –

In a horizontal application, GridMarX serve as a reference mark to help identify the location of framing members behind the gypsum board. For example, if the framing member is located 2 in. to the right of the GridMarX reference mark at the top edge of the board, it will be located 2 in. to the right down the face of the board.

- For ceiling applications, provides reference for locating joists.
- Increases ease and speed of installation.
- Makes inspections easier.
- Provides invaluable reference marks for utilities and reduces potential to fasten through pipes and wires.
- Assists apprentices with learning curve for faster training.
