

Bathtub-to-Shower Conversion Kit/Deluxe with Liner and Drain

Innovations for Contractors, Builders and the Do-It-Yourselfer

Install Your Shower — **FAST, EASY & RIGHT**

Bathtub-to-Shower Conversion Kits permit easy construction of shower floors with the proper minimum water drainage slope of ¼" per 12" run. These time-saving kits permit construction of standard 36" x 60" shower areas with an offset drain. No need to move the drain to center. Custom shower kits and additional components are available to accommodate areas up to 144" x 144" with a centered drain.
