Application Instructions

Surface Preparation: Remove existing wallcovering and adhesive prior to the installation of new wallcovering. All walls must be patched, cleaned, smooth and dry. New Construction: Prime surface with a white pigmented primer, such as PRO-977 ULTRA-PRIME[®], to reduce potential see-through of patching and joints under a lightweight or light color wallcovering.

MIXING INSTRUCTIONS:

FOR LIGHTWEIGHT WALLCOVERING: Use six (6) pints of water. Hangs approximately 6-8 single rolls.

FOR PRE-PASTED WALLCOVERING: Use eight (8) pints of water, hangs approximately 8-10 single rolls.

FOR WALL SIZE: Use eight (8) pints of water. Sizes approximately 260 sq. ft. of wall surface.

FOR PAPIER MACHE: Use four or five (4 or 5) pints of water for desired consistency.

1. Fill clean pail with recommended amount of lukewarm water.
2. Slowly add entire box of paste into the water while stirring vigorously. Stir continuously until a smooth and desired consistency is obtained. After mixing, let stand for five minutes and then stir again before using. Stir occasionally while using for best consistency.

Application Method:

1. Apply paste to the center of the wallpaper with a brush or roller, spread evenly over entire surface.
2. After hanging, remove excess paste from surfaces and seams with a clean sponge.

Drying Time: Drying time will vary depending on the temperature, ventilation and humidity of the room.

Clean-Up: Before the adhesive dries, remove the excess with clean water. Additional effort may be required if the adhesive is allowed to contact the surface of embossed or textured vinyls.
