

Care & Maintenance Guide

Wood Products

To clean, simply use a soft cloth moistened in lukewarm soap & water then buff with a dry, clean cloth.

- NEVER use glass cleaners on finished furniture, ammonia will chemically attack the lacquer.
- NEVER allow liquids of any kind to remain in decorative route lines; absorption causes wood to warp and finishes to de-laminate.
- Prevent marking by not writing directly on the surface.
- Prevent fading by not placing the item in direct sunlight.
- Prevent discoloring by using cloth placemats rather than rubber-based ones.
- Prevent yellowing by not using commercial waxes and polishes.
- Prevent damage to the finish by not placing hot metals, such as pots or kettles, on the surface.
- Prevent splitting by maintain even humidity conditions in your home.

Natural Stone Products

Generally, the best care for natural stone is to keep it clean & buffed. Especially around faucets, wiping off the water will prevent a mineral buildup (a whitish, dull residue on the stone).

- For cleaning marble, always use a pH neutral cleaner. Any acid cleaner will damage the stone.
- Acid does not harm granite, but oil will soak in, leaving a darker area. Wipe up oils, spills, and splatters immediately, using a mild household cleaner. Rinse and buff dry.
- We recommend using a resin-based penetrating sealer to reseal the stone. All natural stone is porous & needs to be sealed periodically to prevent staining liquids from penetrating. Sprinkle a few drops of water on the surface, if they bead up then the sealer is adequate. If they quickly soak in, it is time to reseal the stone.

Quartz Products

- For regular cleaning, wipe down countertop with a damp cloth or paper towel & if necessary, a small amount of non-bleach, non-abrasive cleanser. Avoid waxes, bleaches, oils, nail polish remover & high pH cleaners. In the event of a spill wipe up as soon as possible.
- To avoid heat damage, do not place hot materials directly on the countertop.

Ceramic Products

- For regular cleaning, wipe down the countertop with a damp cloth or paper towel and, if necessary, a small amount of non-bleach, non-abrasive cleanser. Avoid waxes, bleaches, oils, nail polish remover and high pH cleaners. In the event of a spill wipe up as soon as possible.
