

Adding distilled water to your Basement Watchdog battery is quick and easy.

1. Unscrew the cap of the bottle, add distilled water and screw the cap back onto the bottle. **Never** add acid to the battery by using this bottle.
2. Remove the battery caps of the battery (see instructions within your system manual)
3. Press the nozzle of the bottle into each cell. The flow of water stops automatically when the cell is filled to the correct height.
