

IMPORTANT INFORMATION ABOUT YOUR SHED KIT

Thank you for purchasing our shed kit. These instructions will construct a 14'x10' building. **If you received two books, use the one with the latest revision date.**

Read the instructions before starting the assembly of the building. If you have any questions about assembling the kit, call 800-245-1577. Business hours (8:00-5:00 ET) Monday thru Friday. After business hours call 724-866-HELP (4357) or email to help@barnkits.com.

The material that is included in our kit is listed on the back page. The optional floor package, if purchased, will be supplied by a local lumber supplier.

Our kit does not include the shingles, the quantity needed is listed on **Step 16.** The siding is primed. You will need to apply a finish coat using latex acrylic paint.

Some of the framing lumber was used in the shipping pallet. Unpack the material from the pallets, then unscrew the bottom runners from the 2x4s. The bit for the screws is packed in the hardware bag. This material will be used for wall bracing and tie plates.

Most buildings are installed on a wood floor and the siding was designed to extend over the wood flooring. If the foundation is a concrete floor cut the siding flush with the bottom of the wall plate to prevent the concrete from contacting the siding.

Stacking the boards, according to size, will make them easier to find when needed. Some boards have colored ends. All the wall studs have black ends, stack these boards together. **Do Not** discard any material until your building is complete.

Before you begin construction, be sure to study this assembly manual. Also, obtain a building permit and check all pertinent building code regulations.

Thank you for your purchase.

Bill & Linda Rinella, owners

When measurements are given for a board length, it is along the longest side.

Tool List

- Hammer & Phillips Screwdriver
- Framing Square & Level
- Hand Saw/circular saw
- Electric Drill/Screwdriver
- Measuring Tape
- 2-8' Step Ladders

Always wear safety glasses when cutting or nailing!

Constructing Details for Deluxe Floor System

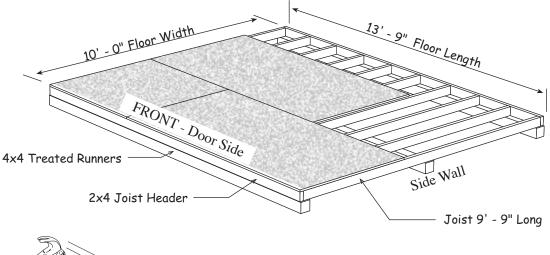

Deluxe floors include 4x4 runners, standard floors do not

Check local building codes in your area, the construction may have to change. For a concrete slab, install sill sealer as a moisture barrier between the concrete and the wall plates. Foam sill sealer can be purchased at home centers in rolls 3-1/2" or wider.

1. Cut joist headers to floor length. See Below. Layout for 16" on center joist spacing. 'X' marks where floor joist will be placed.

2. Cut 2x4-10' floor joists to 9'-9". Treated lumber may be thicker than 1-1/2". Take this into account when cutting the length of floor joists. Shorten joist measurements if necessary to obtain 10'-0" building width.

Nail 2x4 joist headers and floor joist to 4x4.

It is important that the floor be level and square. Before nailing the flooring, measure the floor diagonally (corner to corner). Then measure the opposite corners. These measurements will be the same if the floor is square.

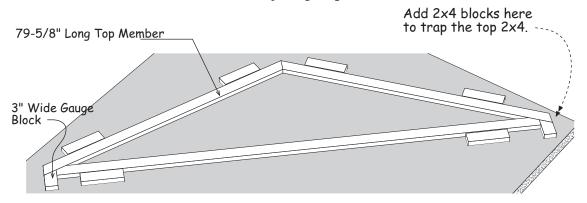

If installing building on a concrete slab, install sill sealer between concrete and bottom wall plate.

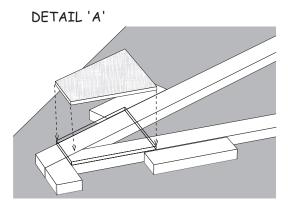

Material Description	14' x 10' shed
2x4 Joist Headers	2 pcs. 14'
2x4 Floor Joist	12 pcs. 10'
4x4 Treated Runners	6 pcs. 8'
Flooring 5/8" or 3/4"	5 pcs. 4x8
Screw Floor Nails	1 lb. 8d
Galv. Box Nails	1 lb. 16d

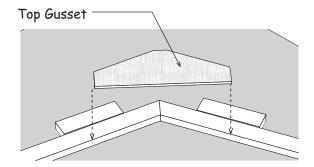

Step 1 Assemble Trusses

- Building Tip: To aid in the assembly of the trusses, temporarily tack 2x4 blocks to the floor. There are short 2x4s, *that may have an angle on one end*, supplied in the kit for this purpose. This will trap the truss parts and insure that all the trusses will be assembled the same.
- 1. Position a 138" long 2x4 and (2) two 79-5/8" long 2x4s diagonally across the floor. The shorter 2x4s will rest on a flat spot on the bottom 2x4. *See Detail* 'A' *below*.
- 2. Affix 2x4 blocks around the truss members to hold them in place. Tack a 3" wide gauge block, *in hardware bag*, at both ends of the bottom 2x4 to maintain the correct overhang.
- 3. Secure the tops together with a wood gusset. Apply wood glue between the 2x4 boards and the gusset. Nail the gusset to the 2x4s with 6d common nails. Use 14 nails per gusset.
- 4. Install 12"x12" wood gussets to the ends of the trusses, flush with the end of the bottom 2x4. Glue and nail the gusset. Use 8 nails per gusset.
- 5. Turn this truss over and apply wood gussets to the opposite side.
- 6. Assemble (5) five more trusses.

Do Not remove blocks from floor until completing Step 2.

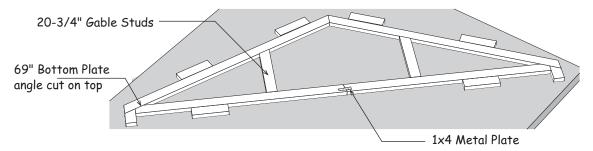

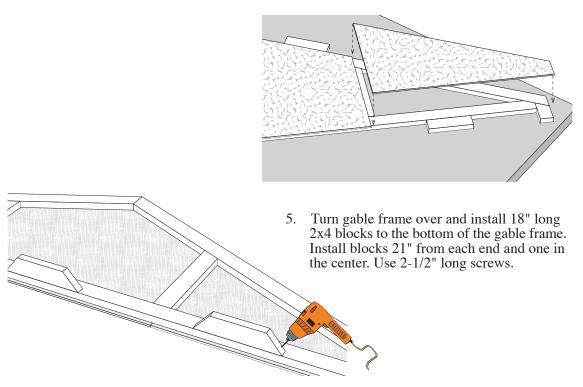

Step 2 Assemble Roof Gables

- 1. Assemble frames using more top members and (2) two 69" long bottom plates. Secure bottom plates together with a 1"x4" metal mending plate.
- 2. Place (2) two 20-3/4" long gable studs between the top and bottom 2x4s. The siding will secure them in place.

- 3. Lay gable siding over the gable frame. The siding should extend 3/4" below the lower 2x4.
- 4. Nail siding to the frame with 6d galv. nails.

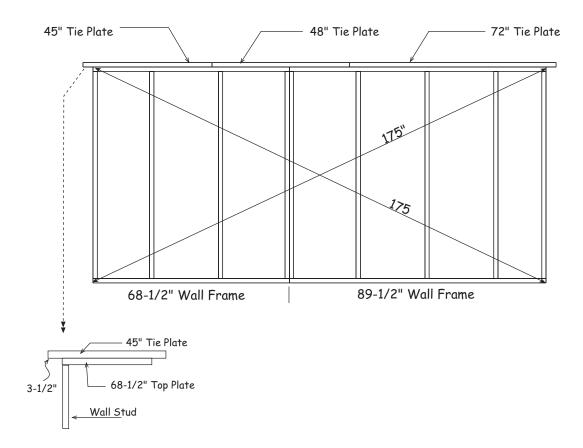

6. Repeat steps to assemble another roof gable.

Step 3 Assemble Back Wall

1. Locate (2) two 2x4 boards 68-1/2" long [green ends]. Locate (2) two 2x4 boards 89-1/2" long. Position these boards together and indicate with 'X' marks, where the wall studs will be located.

68-1/2" Wall Plate			89-1/2" Wall Plate				
X	X	X	Х	Х	X	X	
Х	X	X	Х	Х	X	X	$ \longrightarrow $
<u>↓ 19</u>	9-3/4" > - 24'	·		∢ 23-	1/4"→ ← 24	" →	

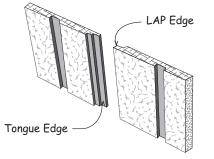

- 2. Install 72" wall studs [*black ends*] between the top and bottom plates. Assemble the frames with 10d sinkers, two nails per stud. Nail the (2) two wall frames together.
- 3. Install 2x4 tie plates over the top plate. The tie plates will extend 3-1/2" beyond the frame.

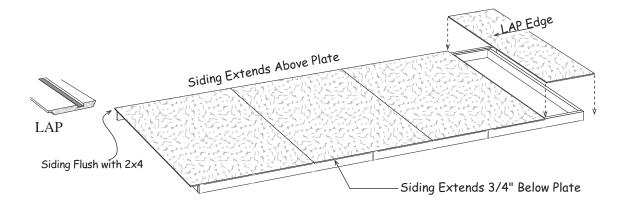

Step 3 Assemble Back Wall Continued

The siding is made with grooves cut into the face, the long edge is beveled so that the siding overlays where they butt. The siding is primed. You will need to apply a finish coat using latex acrylic paint.

To identify which edge we want you to use, we will refer to the edge as either the 'LAP' Edge or the Tongue Edge. Nail siding with 8d galv. nails, spaced 12" apart.

- 4. Square wall frame. Install (3) three 79" long siding panels. Install the first panel with the 'LAP' edge <u>flush with the end</u> of the 2x4 tie plate. The siding should extend 3/4" below the bottom plate. The siding will extend above the top 2x4. Use 8d galv. nails. Space nails 12" apart.
- 5. Install a 20-3/4" wide siding panel last. It will extend 3-1/2" beyond the wall frame.

19	>

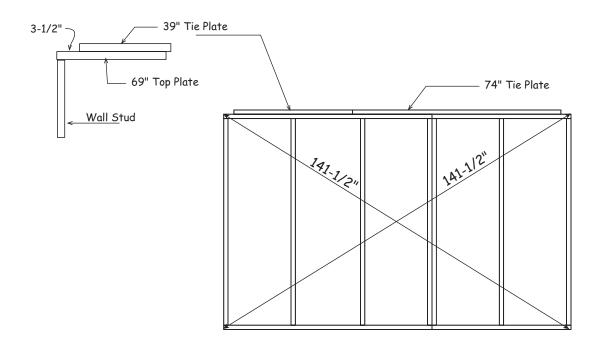

This wall will be lighter and easier to erect if you install the last two siding panels after the wall are set.

Step 4 Assemble Left Sidewall

1. Locate (2) two 2x4 boards 69" long and (2) two boards 51" in length. Position these boards together and indicate with 'X' marks where the wall studs will be located.

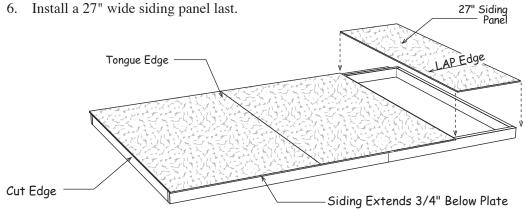

- 2. Install 72" wall studs between the top and bottom plates. Nail both wall frames together.
- 3. Locate the 2x4s removed from the shipping pallet. Cut (2) two of the 2x4s to a length of 74". Select another 2x4 and cut (2) two 39" long 2x4s. Save the other 2x4 for wall bracing.
- 4. Install 39" and 74" long 2x4s as tie plates over the top plate. The 2x4 tie plates will set back 3-1/2" from the end of the wall frame.

Assemble Left Sidewall Continued Step 4

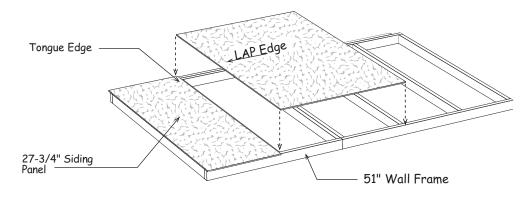

- Square wall frame. Install a 45-3/4" siding panel, *with cut edge*, at the end of the wall and extending 3/4" below the bottom plate. 4.
- 5. Install a full width siding panel.

6. Install a 27" wide siding panel last.

Assemble Right Sidewall Step 5

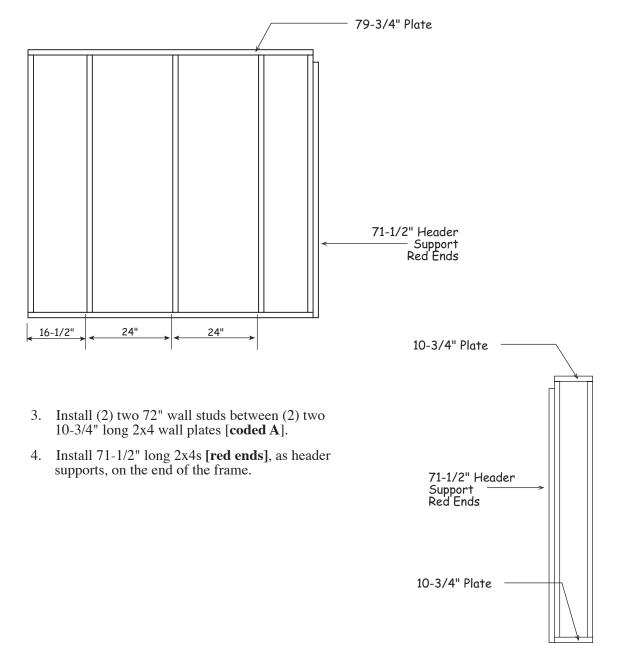

- Repeat Step 4 to assemble the other sidewall. Before applying siding, turn the 1. wall over so the 51" frame is on the left.
- Install a 27-3/4" siding panel, *with tongue edge*, flush with the end of the wall and extending 3/4" below the bottom plate. 2.
- 3. Install a full width siding panel.
- 4. Install a 45" wide siding panel last.

Step 6 Assemble Door Walls

1. Gather (5) five 72" wall studs and (2) two 79-3/4" long 2x4 wall plates. Assemble a wall frame using these 2x4s per drawing below.

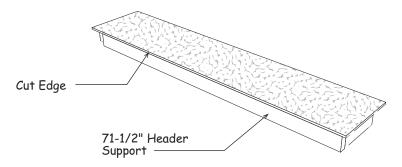

2. Install 71-1/2" long 2x4s [red ends], as header supports, on the end of the frame.

Step 7 Install Siding on Door Wall

If you want the door opening on the left, flip the walls and apply siding to the opposite side of the wall frames.

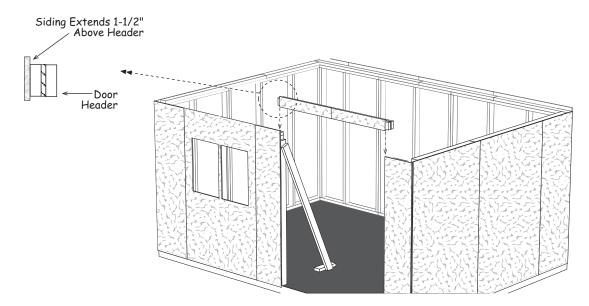

- 1. Select the larger wall frame. 21-1/2" Siding Panel LAP Edge Cut Edge Siding Extends 3-1/2" Past Wall Frame
- 2. Locate a pre-cut 16" wide siding panel that has a 'LAP' edge. Position this panel with the <u>'cut' edge</u> flush with the 2x4 header support and extending 3/4" below the bottom plate. Do not nail along the LAP edge until the other siding panel is installed.
- 3. Install a full width panel next to the one installed above. If you are installing optional windows you can out the openings now or later.
- 4. Install a 21-1/2" wide siding panel, the siding will extend 3-1/2" beyond the wall frame.
- 5. Install a pre-cut 16" wide siding panel with the 'cut' edge flush with the 2x4 header support. The siding will extend 3-1/2" beyond the wall frame and 3/4" below the bottom plate.

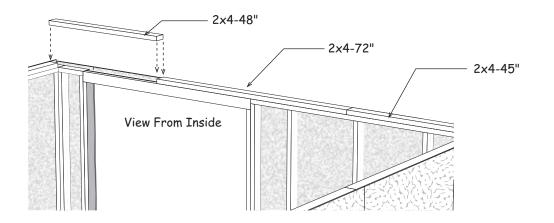

Step 8 Set Lower Walls

1. Secure wall panels together at the corners. Use (4) four 10d coated nails per corner. Nail wall panels to the floor. Nail through the bottom plate. Space 10d sinkers 24" apart.

- 2. Install the 2x4 door header between the front wall panels. The siding extends 1-1/2" above the top of the door header to receive 2x4 tie plate. Nail through the wall stud into the ends of the header. Toenail into the top wall plates. Wall trim, installed later, will hide where the siding butts the front wall panels.
- 3. Install a 2x4-7' board (from shipping pallet) at the door opening to hold the wall straight.

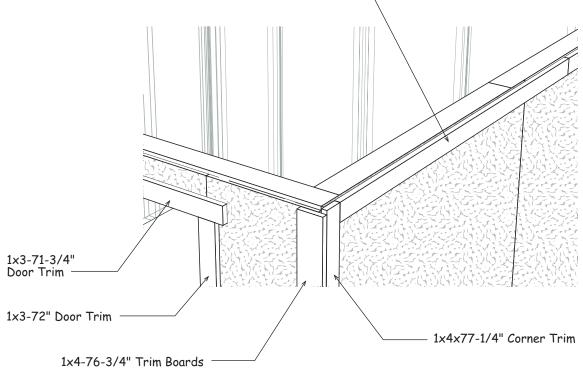

4. Install a 45", a 48" and a 72" long 2x4s across the top of the front wall as tie plates. Use 10 d sinkers

Step 9 Install Trim

Use 8d galv. nails when installing trim.

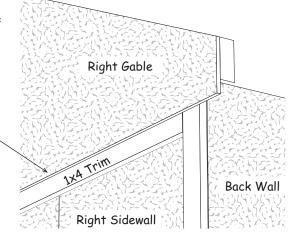

- 1. Install lx3x72" trim boards along each side of the door opening. Tack these boards with a couple nails; you may want to move the trim later when you install the doors.
- 2. Install a 1x3x71-3/4" board, that has angle cuts on both ends, over the door opening.
- 3. Install 1x4x77-1/4" trim boards at the front and rear corners of the sidewall. Install the trim flush with face of the siding on the front and back walls.
- 4. Install a 1x4x58-1/2" trim board flush with the top of the sidewall. Cut another 58-1/2" long trim board to fit.

- 5. Install trim on the opposite sidewall.
- 6. Install 1x4x76-3/4" corner trim at the front corners. Install 1x4 flush with the bottom of the siding on the front wall.

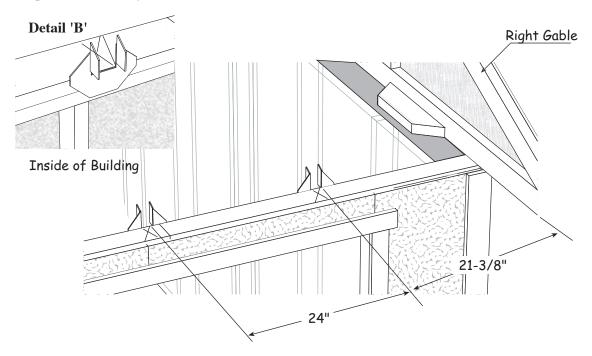

Step 10 Install Gable on Right Sidewall

- 1. Install the gable on the right sidewall. The gable siding will extend over the 1x4 trim on the lower wall. Secure gable to wall by nailing through the gable blocks with 10d sinkers.
- 2. Nail siding along the 1x4 trim board with 6d galv. nails.
- 3. Install the left gable.

Step 11 Install Trusses

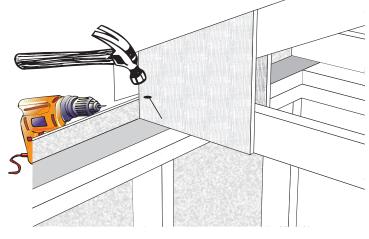

1. Layout the truss spacing by placing 'X' marks where the trusses will be located. Measure from the inside face of the gable when marking the location of the first truss. **Important:** When marking the back wall, place the 'X' mark on the same side of the line so your trusses are parallel when they are installed.

2. Using 1-1/2" hanger nails, install metal hangers to the 2x4 tie plate on the <u>front wall</u>. The opening should line up with the 'X' mark, the bottom of the opening, flush with the 2x4 tie plate.See **Detail 'B'**.

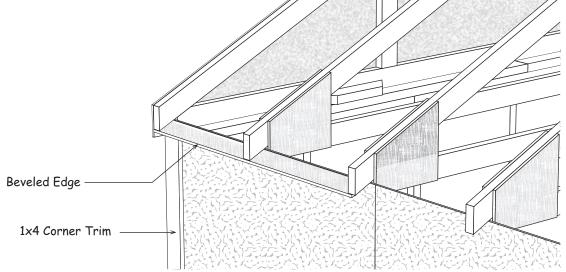

Step 11 Install Trusses Continued

- 3. Place a truss in the front hanger and over the 'X' mark on the back wall. **Important**; the 2x4, *not the wood gusset*, should cover the 'X' mark on the rear 2x4 plate. Check the truss spacing, front and back, to make sure the truss is parallel.
- 4. Secure the truss to the back wall by screwing through the rear siding into the end of the truss with a 2-1/2" wood screw. You can also toe nail the truss to the 2x4 tie plate with 10d sinkers.
- 5. Install the rest of the trusses.

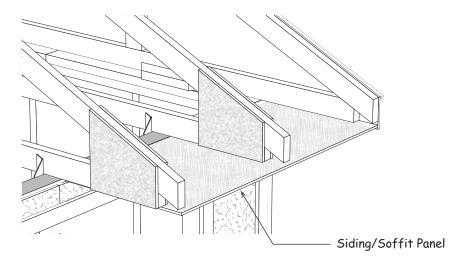

Step 12 Install Rear Soffit & Trim

- 1. Install pre-cut primed soffit panels under the truss overhang.
- 2. Install 1x4 trim boards on the rear corners.

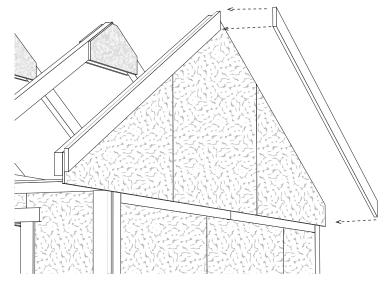

Step 13 Install Front Soffit

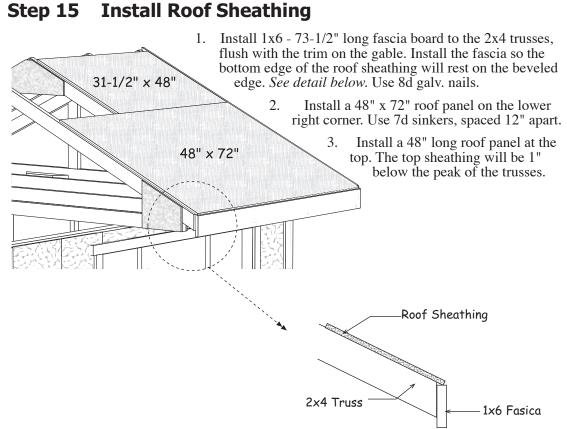

- 1. Secure the front of the trusses to the H1 hangers with 1-1/2" hanger nails.
- 2. Install 21" soffit panels under the front overhang. Cut the first soffit panel to meet the center of the truss. Fasten to the trusses with 6d galv. nails.
- 3. Install (2) two more 48" wide soffit panel. Cut the last panel to fit.

Step 14 Install Gable Trim

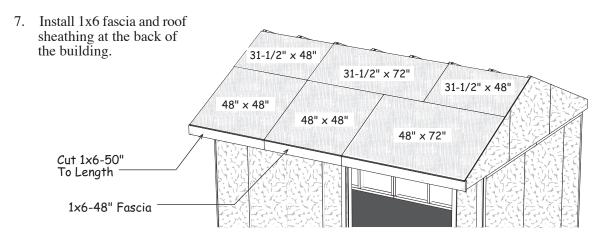

Install the 1x4 gable trim extending 1/2" above the siding on the gable. When installed later, the roof sheathing will be flush with the top of the trim.

4. Install a 48" long 1x6 trim board.

- 5. Cut and install a 50" long 1x6 trim board flush with the gable trim on the left gable.
- 6. Install the remaining roof sheathing.

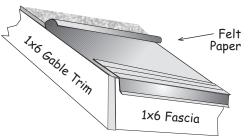

Step 16 Install Loft flooring

- 1. Gather (2) two 24" x 48" and (2) two 16-1/2" x 48" pieces of OSB sheathing. Install these panels over the bottom 2x4 truss member. Secure with 7d sinkers.
- 2. Notch panels around gable studs. -

3. Cut the first 24"x 48" panel to meet the center of the 2x4 truss.
16-1/2" × 48" Sheathing
4. Repeat to install loft flooring at the other end of the building.

Install Roofing — Not Supplied in Kit

1. Install metal roof edging perimeter of the roof area. If you are not installing shingles at this time, you can purchase felt paper to protect the roof sheathing. Install the felt paper before you install the metal roof edge.

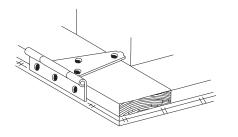

2. Install shingles according to the instructions on the wrapper. If you need more detailed instructions on installing shingles, there are good publications at book stores or newsstands.

Building Tip: Install ridge vent in lieu of shingles caps. Ridge vent provides ideal ventilation, preventing heat and moisture from damaging your building or its contents.

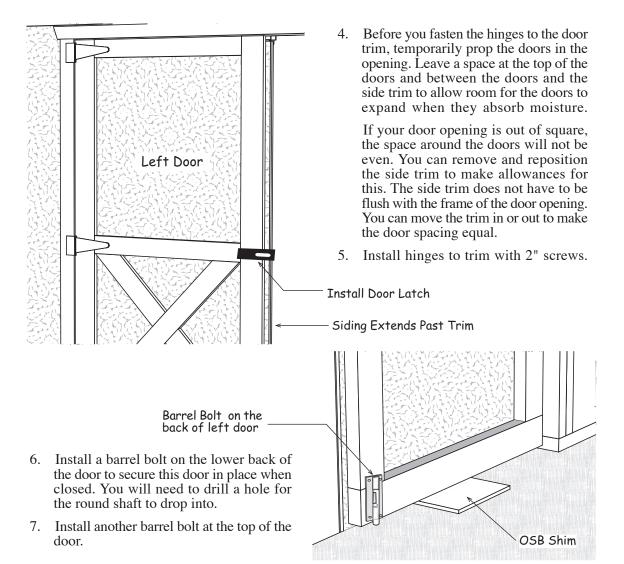

Material Purchased Locally						
10'x10' Building	6	bdl.	Roof Shingles	6	pcs.	Roof 'drip' edge
14'x10' Building	8	bdl.	Roof Shingles	7	pcs.	Roof 'drip' edge

Step 17 Install Doors & Hardware

- Lay the <u>left door</u> with the trim facing up. The siding on the left door <u>extends past the door trim</u>. See detail below.
- 2. Install 5" hinges to the left side of the door frame. To position the hinge properly, hold the rectangular plate against the frame. Use 1-3/4" black screws.
- 3. Install hinges to the right side of the other door.
