

GARDEN SHED

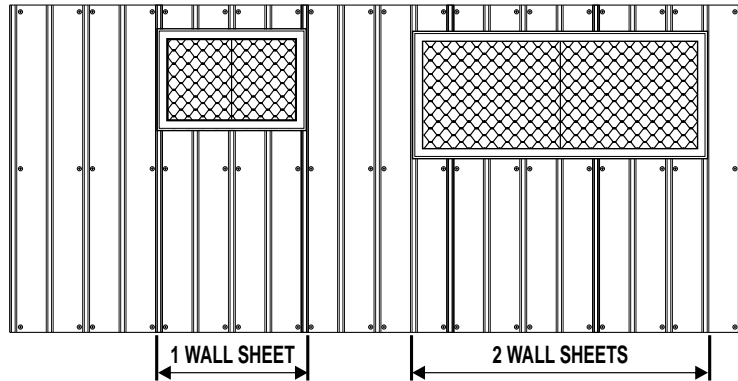

FITTING WINDOWS

INSTRUCTIONS

Widths of Windows:

Small Window = width of 1 Wall Sheet

Large Window = width of 2 Wall Sheets (side by side)

Step 1

NOTE:

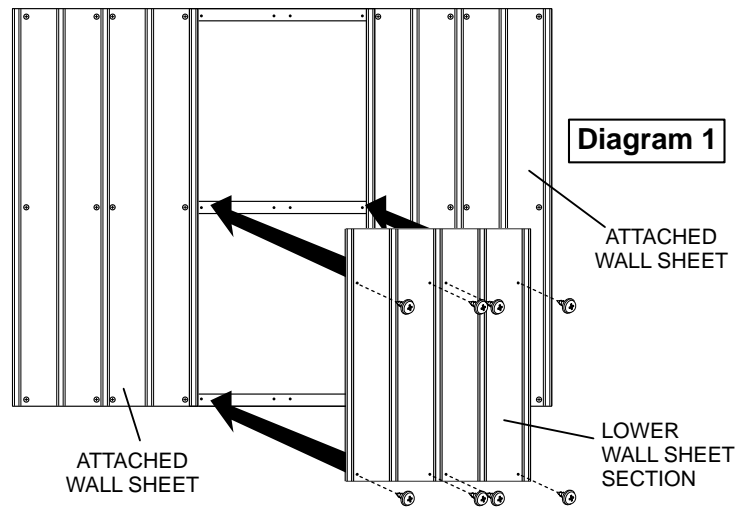

For the purpose of this assembly, the diagrams demonstrate the installation of a small window.

Choose the position for the window.

Fit the lower wall sheet section to the shed.

NOTE: Lower wall sheet **MUST** underlap both attached wall sheets on either side. To make this easier, loosen off the screws at the bottom and middle of both attached wall sheets at either side.

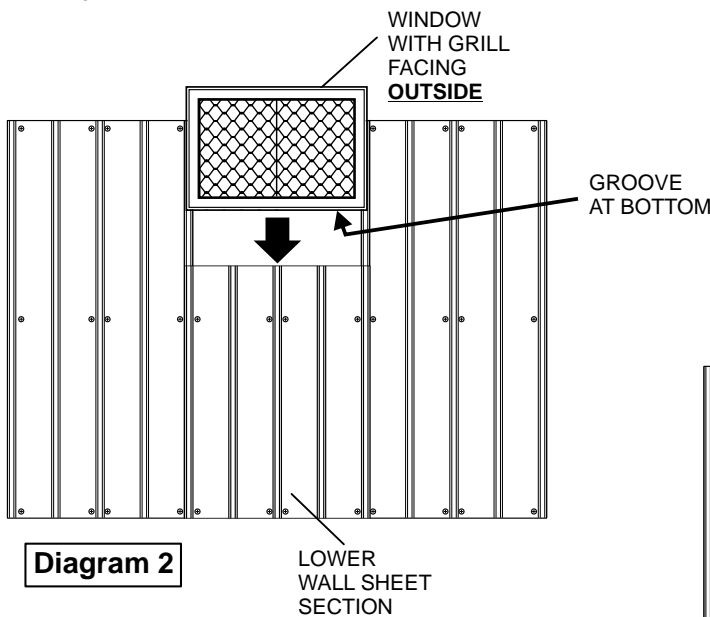

Secure with screws. See Diagram 1.

Step 2

With the grill facing the **OUTSIDE** of the shed, slide the window down between the two attached wall sheets, and fit the groove at the bottom of the window over the top edge of the lower wall sheet section.

See Diagram 2.

Step 3

Fit the upper wall sheet section to the top of the window, underlapping both attached wall sheets on either side and into the groove at the top of the window. To make underlapping easier, loosen off the screws at the bottom and middle of both attached wall sheets at either side.

Secure using screws. See Diagram 3.
