NET CLIPS (B)

HANGING ROD SEGMENTS

HANGING ROD SEGMENTS

MOUNTING CLIPS (A)

CONNECTOR PIECE

**1** Lightly mark points on the wall where shelf will be mounted.
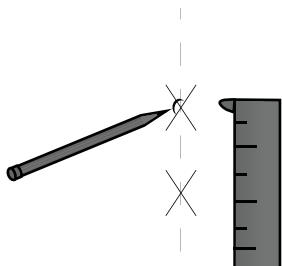

2 Retrieve the mounting template from the package of components along with 3 double sided adhesive pieces of tape. Peel off one side of the tapes' covers and stick them on the backside of the mounting template.

MOUNTING TEMPLATE (FRONT)

BACKSIDE

DOUBLE SIDED TAPE
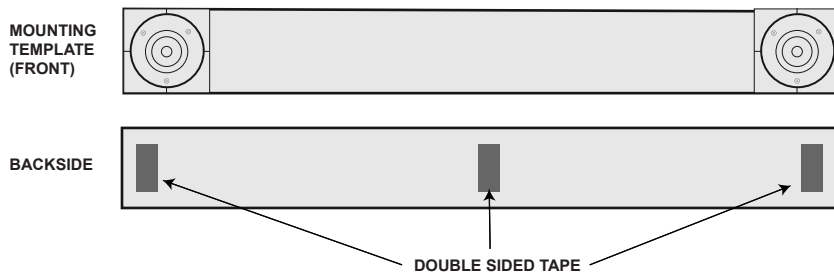

3 Use a level when sticking the template to the wall. Mark the wall through the template to spot the drill holes for the first 2 brackets. For the third bracket, you will be shifting the template horizontally left or right depending on your prefences. When ready, mark the final holes.

LEVEL

FIRST TWO BRACKETS

LAST BRACKET
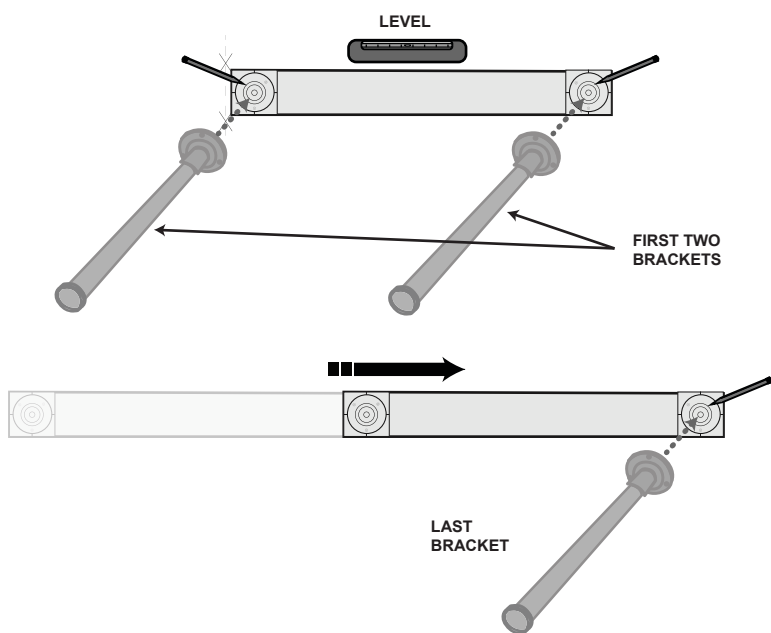

4 Remove the template and drill holes at the marked locations. Firmly seat drywall anchors using a malet and use screws to mount the brackets.

TIGHTEN BRACKETS
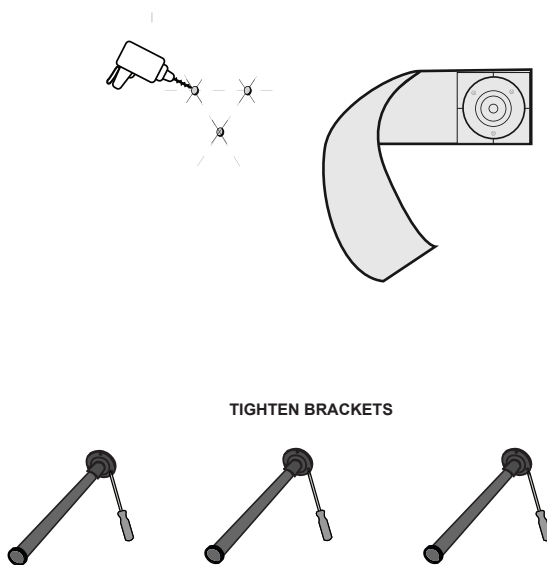

**DRYWALL ANCHOR INSTALLATION**

If screws are going directly into wood trim or wall studs - drill 1/8" (3mm) holes and install screws through bracket.
If screws are going into hollow wall - drill 3/16" (5mm) holes and push or lightly hammer plastic anchors into holes.
Then install screws through brackets. Do not tighten screws too much - just snug is best.
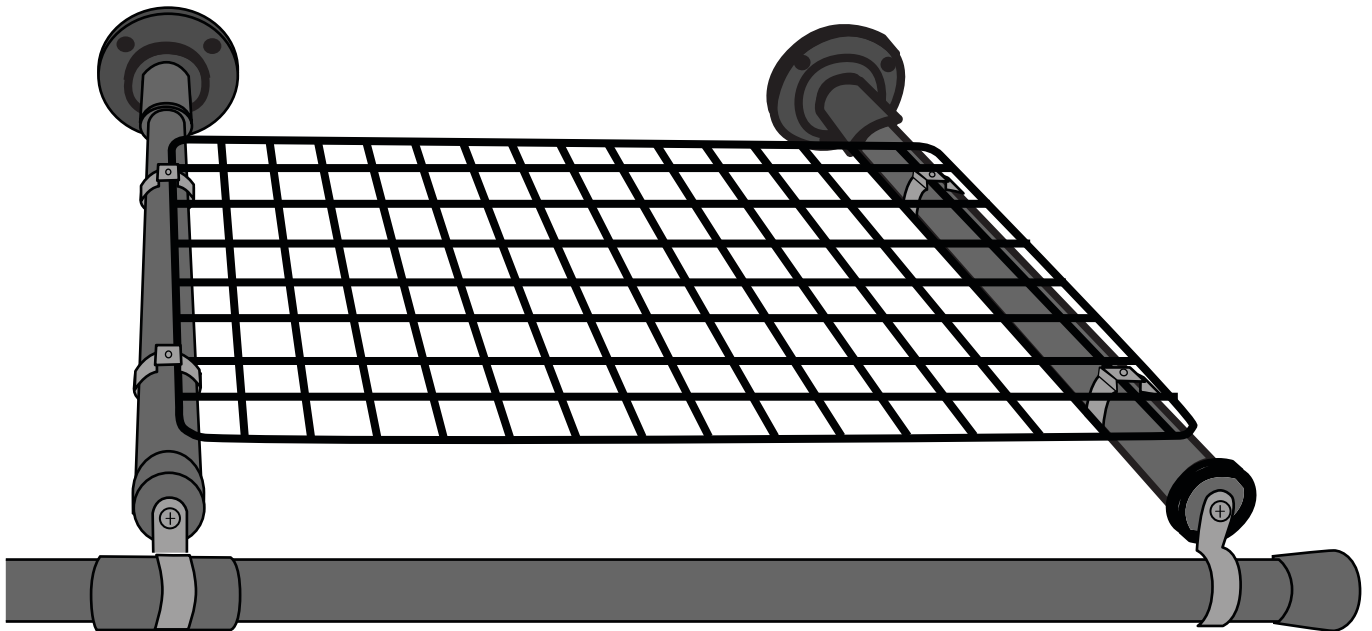

5 Find the connector piece and use it to adjoin the 2 rod segments. Then place a mounting clip (A) on the rod connector and insert a screw into the hole. Screw and tighten the connector onto the middle bracket.
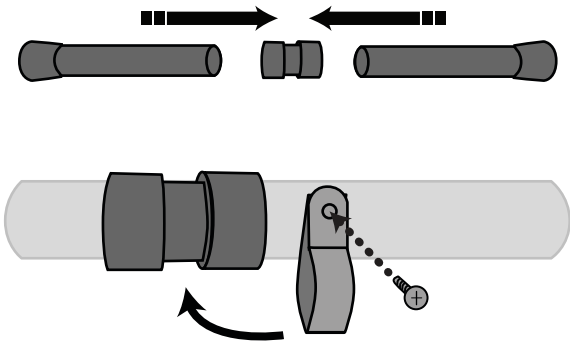

6 Proceed to attach mounting clips to ends of the hanging rod segments and attach them to the outter rod brackets with screws.

7 Place nets on the rod brackets. Fasten the metal nets to the brackets by placing 2 net clips (B) on each bracket (see example below). Once you have done so, the shelf is completed.
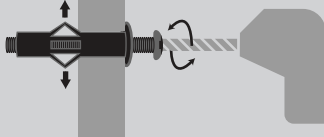

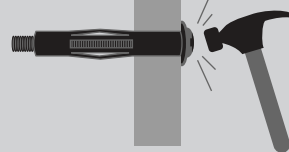

METAL WALL ANCHOR INSTALLATION*

1 Drill a hole into the wall, using a 1/4"(6mm) inch drillbit.

2 Tap the anchor into the hole until it is flush with the surface of the substrate.

3 Attach drill or screwdriver to head of screw and expand the anchor by tightening the head.

4 Remove the screw and place it through the fixture then back into the anchor. Tighten the screw until the fixture is secure.

*USE ON 3/8"-1/2" THICK WALLS ONLY!
